| 7.20.3 POST mode TFTP update firmware .....  | 51                 |

# 1 Welcome

GW0220 series of gateways are innovative gateways that offer a rich set of functionality and superb sound quality. They are fully compatible with SIP industry standard and can interoperate with many other SIP compliant devices and software on the market.

## 2 Installation

### 2.1 Package List

The GW0220 gateway package contains:

- 1) One GW0220 gateway
- 2) One universal power adapter
- 3) One Straight Ethernet cable

### 2.2 Safety Compliances

The gateway should only be operated with the universal power adapter provided with the package. Damages to the gateway caused by using other unsupported power adapters would not be covered by the manufacturer's warranty.

### 3 Product Overview

GW0220 IP Gateway is a next generation IP network facility based on industry open standard SIP (Session Initiation Protocol) . Built on innovative technology, GW0220 IP Gateway features market leading superb sound quality and rich functionalities.

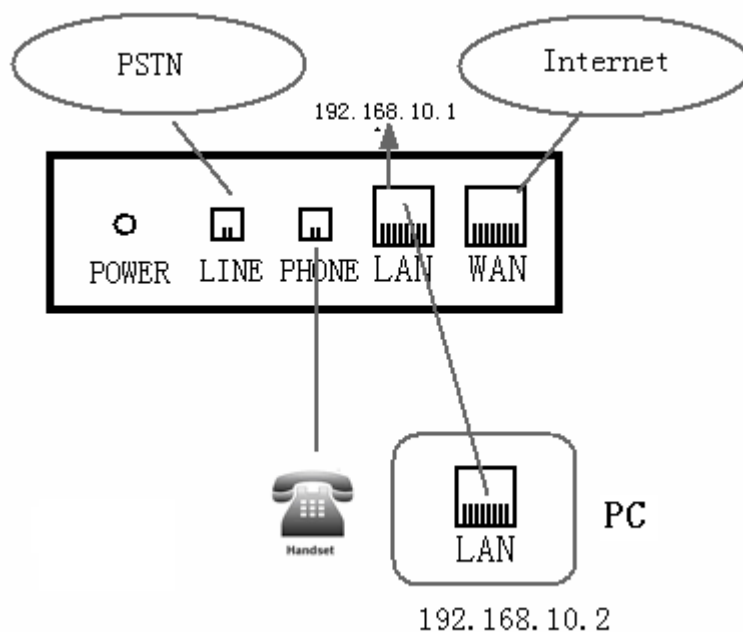

- Power:** Output Power:12VDC,500mA.
- Line:** RJ11 port. Lifeline . Connect to PSTN line
- Phone:** RJ11 port, FXS . Connect to normal phone or PABX
- WAN:** RJ45 port.for Internet
- LAN:** RJ45 port.for PC

- Power:** Power indicator.
- REG:** Server indicator. Registered: ON; Registering: Blinking; Do not register: OFF.
- Phone:** Indicate the calling status.
  - Hook-on: OFF.
  - Hook-off and in VoIP state: ON.
  - Hook-off and in PSTN state: OFF.

## 4.0 Web configuration

### 4.1 Physical connection

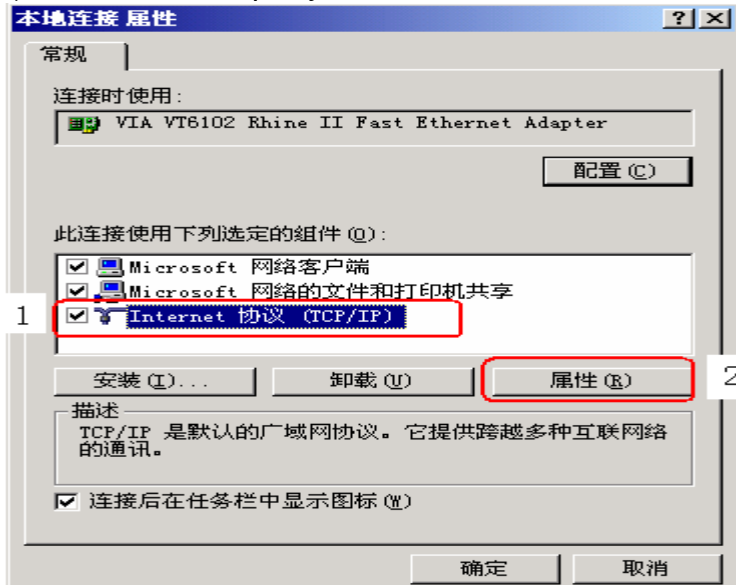

### 4.2 Preparation for Web configuration

The IP Gateway Web Configuration Menu can be accessed by the following URL: <http://Gateway-IP-Address>. The default LAN IP address is “192.168.10.1” and WAN IP address is “192.168.1.179”. If the web login port of the gateway is configured as non-80 standard port, then user need to input <http://xxx.xxx.xxx.xxx:xxxx/>, otherwise the web will show that no server has been found.

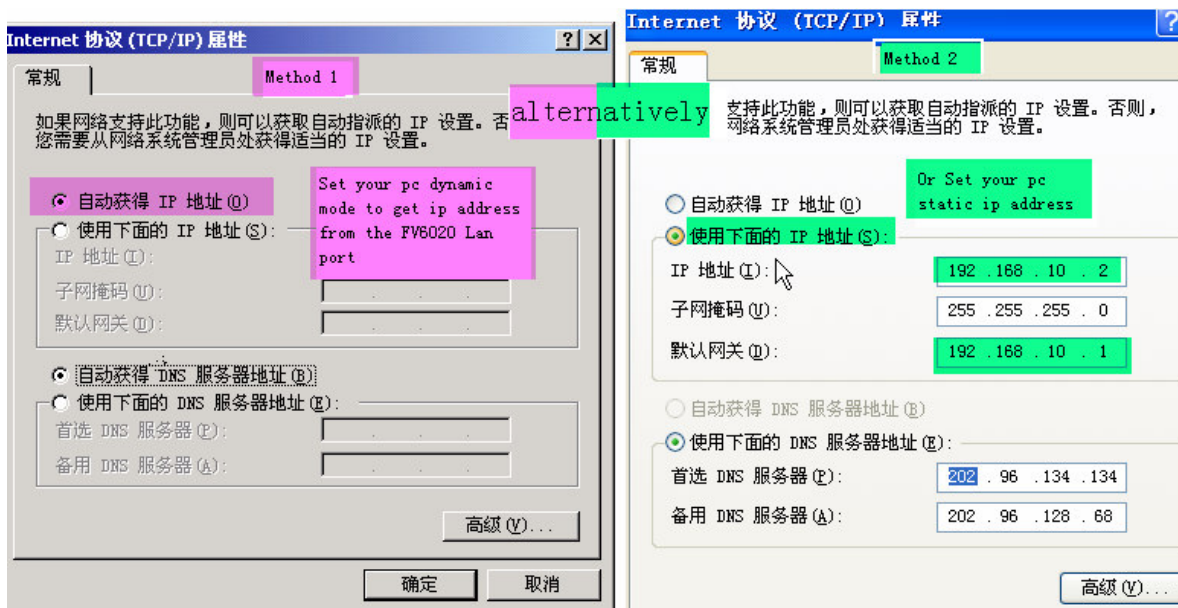

If connect PC with GW0220 LAN port and config to obtain IP address automatically, you could check the default gateway IP which is LAN IP address. The procedure as below

a) Access to “Property of local area connection” dialog box

b) Select “Internet Protocol (TCP/IP)”, click “Property” button

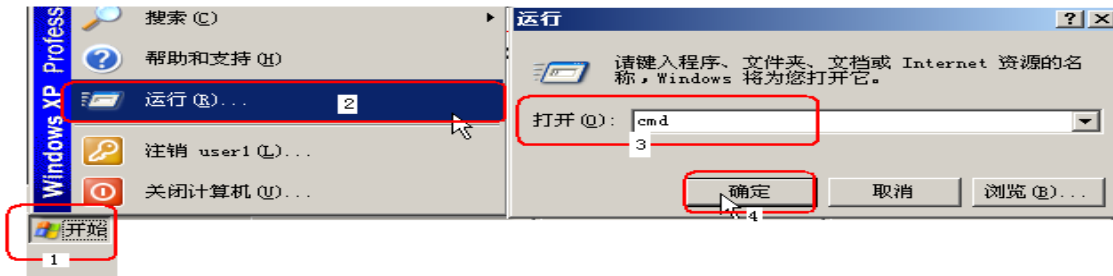

c) Setting refers to below dialog box, and then click “OK” button, PC will obtain IP address automatically. ( or set your pc static ip 192.168.10.2 )

Method 1

Method2

d) Input "cmd" command on the RUN submenu under PC START, key in "ipconfig/all on the command lines dialog box to find the default gateway IP address, which is GW0220 LAN IP address

### 4.3 User verification

Users are requested to make verification when config or browse the IP phone thru web pages, users can direct login the config menu by inputting username and password as below ,

Default username and password is:

Administrator: Username: admin password: admin low level user interface  
 User: Username: guest User: guest high level user interface

Username:

Password:

## 4.4 Current State

On this page user can gather information of each commonly-used parameter of the phone, it is shown as the following figure:

- Network section: Display the current WAN, LAN configurations of the phone
- VoIP section: Display the current default signaling protocol in use , and server parameter in use of each protocol
- Phone Number section: Display the phone number against each protocol

**Running Status**

**Network**

|     |              |               |             |                   |
|-----|--------------|---------------|-------------|-------------------|
| WAN | Connect Mode | DHCP          | MAC Address | 00:01:0e:e9:21:00 |
|     | IP Address   | 192.168.0.100 | Gateway     | 192.168.0.1       |
| LAN | IP Address   | 192.168.10.1  | DHCP Server | ON                |

**VOIP**

|     |                 |                |              |                |
|-----|-----------------|----------------|--------------|----------------|
| SIP | Register Server | 203.208.198.51 | Proxy Server | 203.208.198.51 |
|     | Register        | ON             | State        | Registered     |
|     | Public Outboud  | ON             | SIP Stun     | OFF            |

**Phone Number**

|             |      |
|-------------|------|
| Public SIP  | 6665 |
| Private SIP |      |

Version: VOIP Gateway 1.306 Jul 19 2006 10:59:08      version

- The version number and date of issue have been shown at the end of this page

## 4.5 Network configuration

Network configuration includes WAN Config and LAN Config.

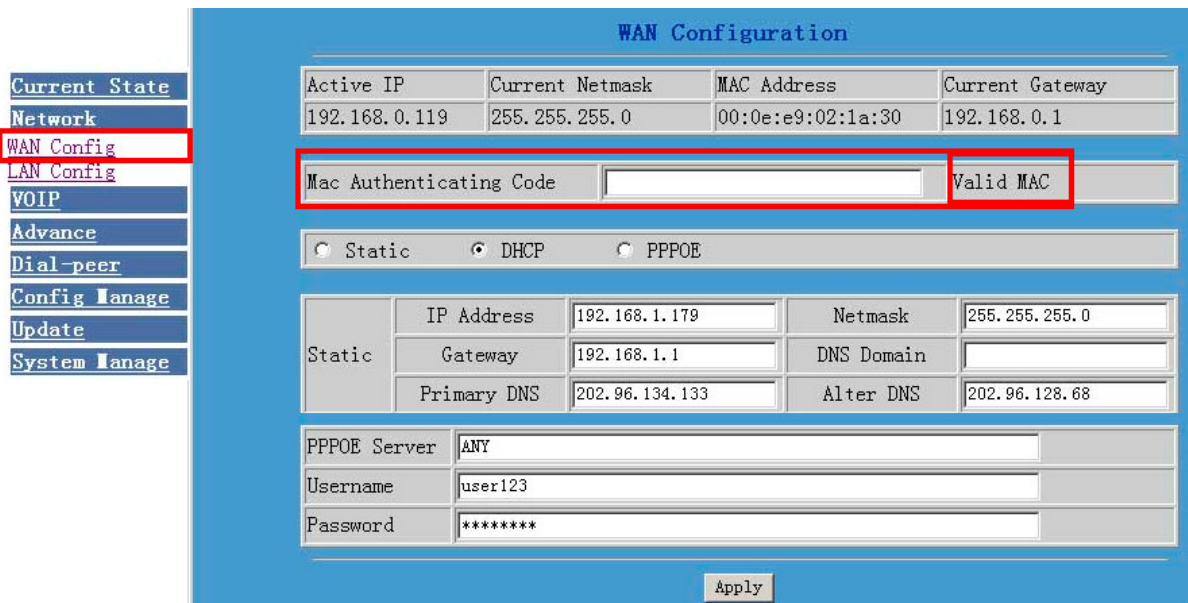

### 4.5.1 WAN Configuration

This web page displays the WAN parameter configuration.

User can view the current network IP linking mode of the system on this page.

User will be authorized to set the network IP, Gateway and DNS if the system adopts the static linking mode. If the system selects DHCP service in the network which is using DHCP service, IP address will be gained dynamically. If the system selects PPPOE service in the network which is using the PPPOE service, then the IP address will be gained by the set PPPOE ISP internet and password of the account.

**Note: if IP address has been modified, the web page will no longer respond owing to the modification, so new IP address should be input in the address field now.**

Display <valid MAC > , that means the GW0220 had been certificated.

Display <invalid MAC> , that means the phone need a MAC Authenticating Code .(get it from Favil or your provider )

Display <invalid MAC >,that means the GW0220 can not work normally.

Three models (Static /DHCP/PPPoE) are paratactic. Users can set the right model base on actual requirements.

● **WAN Port static mode configuration**

Default network config is DHCP model; Users need to set below parameters

IP Address

WAN IP address

|             |   |
|-------------|---|
| Netmask     | Network mask                              |
| Gateway     | Default gateway IP address                |
| DNS Domain  | Option configuration                      |
| Primary DNS | IP address for primary Domain Name Server |
| Alter DNS   | Option configuration                      |

Click “Apply” button after finished above setting, IP Phone will save the setting automatically with immediate effect.

If users visit GW0220 thru WAN, user need to know the GW0220 WAN port ip address . ( on normal phone operation : #\*111# for hear GW0220 saying IP)

#### ● WAN port DHCP mode configuration

Select “DHCP” on below single option, IP Phone will auto-config the WAN parameter with immediate effect.

Static
  DHCP
  PPPOE

#### ● WAN port PPPoE mode configuration

Select “PPPOE” on below single option,

Static
  DHCP
  PPPOE

Set below parameter of PPPOE mode

|              |     |      |           |          |          |
|--------------|-----|------|-----------|----------|----------|
| PPPOE Server | ANY | User | pppoetest | Password | ●●●●●●●● |
|--------------|-----|------|-----------|----------|----------|

|               |  |
|---------------|--|
| <b>Server</b> | <b>If ISP no special requirements, remains default setting</b> |
| User          | Provided by ADSL ISP   |
| Password      | Provided by ADSL ISP   |

Click “Apply” button after finished above setting, IP Phone will auto-config the WAN parameter with immediate effect. The setting of WAN is still effective and enables IP Phone to connect to internet.

#### 4.5.2 LAN Configuration

This web page displays the LAN parameter configuration. Please note once the bridging mode is selected, the LAN configuration will be no longer effective.

**LAN Configuration**

Bridge Mode

IP  Netmask

DHCP Service  NAT

If you are using lan ip, please reconnect with new IP after your modification !

### Configuration Example

- **Config LAN: generally config one private IP address**

IP  Netmask

IP LAN IP address  
Netmask Network Mask

- **Start LAN DHCP Service and NAT or not: default setting is start**

DHCP Service  NAT

Start Bridge Mode or not( transparent mode ): Once start Bridge Mode, some parts of LAN config will be disabled, and the phone will no longer set IP address for LAN physical port , LAN and WAN will join in the same network ;

## 4.6 VOIP Configuration

This section is to config signaling protocol for the SIP Server and Client.

### 4.6.1 SIP 1 configuration

User can configure specific parameter of SIP1 on this page.

| SIP[Registered] Configuration                                  |               |   |                |
|--|---------------|---|----------------|
| Register Server Addr   | 203.82.162.13 | Proxy Server Addr   |                |
| Register Server Port   | 5060          | Proxy Server Port   |                |
| Register Username  | 100533        | Proxy Username  |                |
| Register Password  | •••••         | Proxy Password  |                |
| Domain Realm   |               | Local SIP Port  | 5060           |
| Phone Number   | 100533        | Register Expire Time                                      | 60 seconds     |
| Detect Interval Time   | 60 seconds    | RFC Protocol Edition                                      | RFC3261        |
| Encrypt Key  |               | Server Type   | common         |
| DTMF Mode  | DTMF_RFC2833  | User Agent  | Voip Phone 1.0 |
| <input checked="" type="checkbox"/> Enable PRACK               |               | <input type="checkbox"/> Signal Encrypt                   |                |
| <input type="checkbox"/> Auto Detect Server                    |               | <input type="checkbox"/> Rtp Encrypt                      |                |
| <input checked="" type="checkbox"/> Enable Keep Authentication |               | <input type="checkbox"/> Enable Session Timer             |                |
| <input type="checkbox"/> Enable Via rport                      |               | <input checked="" type="checkbox"/> SIP(Default Protocol) |                |
| <input checked="" type="checkbox"/> Enable Register            |               |   |                |

**Definition of each parameter described as below**

|                                 |   |
|---------------------------------|---|
| SIP[Unregistered] Configuration | SIP register state ; if register successfully, show “Registered” in the square bracket , otherwise show Unregistered  |
| Register Server address         | Set SIP register server IP address  |
| Proxy Server addr               | Set proxy server IP address ( usually SIP will provide the same configuration of proxy server and register server, if different(such as different IP addresses), then each server's configuration should be modified separately ) |
| Register Server Port            | Set SIP register server signal port   |
| Proxy Server Port               | Set SIP proxy server signal port  |
| Register Username               | Set SIP register server account username ( Usually it is the same with the config port number )   |
| Proxy Username                  | Set the SIP proxy server account username   |
| Register Password               | Set password of SIP register server account   |
| Proxy Password                  | Set password of SIP register account  |
| Domain Realm                    | Enter the sip domain if any, otherwise GW0220 will use the proxy server address as sip domain. (Usually it is same with registered server and proxy server IP address).   |
| Local SIP Port                  | Set local signal port , the default is 5060   |
| Phone Number                    | Set assigned phone number   |
| Register Expire Time            | Set expire time of SIP server register, default is 60 seconds   |
| Detect Interval Time            | Set detection interval time of server, default is 60 seconds  |
| RFC Protocol Edition            | Enable the phone to use protocol edition. When the phone need to communicate with phones using SIP1.0 such as CISCO5300 and so on, need to modify into RFC2543. the default is to RFC3261 ;                                       |
| DTMF Mode                       | Set DTMF sending mode, support RFC2833, DTMF_RELAY (inband audio) and SIP info  |
| User Agent                      | Set the user agent if have, default is common   |
| Prack                           | Enable / Disable SIP prack function. Default is unchecked. Prack is   |

|                     |   |
|---------------------|---|
|                     | same with ACK that is used for temporary response.Prack is one of SIP request info.   |
| Singal Encode       | Enable/disable singal encryption according to the server type.  |
| Rtp Encode          | Enable /disable Voice encryption according to the server type.  |
| Session Timer       | Enable/disable support RFC4028  |
| Keep Authentication | Enable /disable support register with authentication,so that GW0220 neen`t carry authentication request ,response each time. When server receive the register. request with authentication, server will response ACK info .   |
| Via rport           | Enable/disale support RFC3581。 When GW0220 is behind a NAT. "rport " allows GW0220 to request that the server send the response back to the source IP address and port from which the request originated.   |
| Encrypt Key         | Fill in the key for encryption according to the Server type selected. Default is common.  |
| Enable Register     | Configure enable/disable register   |
| Auto Detct Server   | Enable/disable automatically detect server function. Enable the function when server forbid register time that is too short and server do not initiatively maintain to send terminal nat packets . Enable the function and set the sending the ip packets time is less than nat maintain time |

After finished the aforesaid network and VoIP configurations on the phone and network communication has been implemented , the user can make VoIP calls by the calling register and proxy server.

*Note:*

*Some ISP internet may inhibit the phone to register and cancel the register in process, so user had better cancel apply or register soon and then submit registration repeatedly. Server may stop response of dialogue machine, then the phone receives no register/cancel login request and registration state will show incorrectness!*

**Configuration Example**

Firstly users should get the account info from VOIP Service Provider (Including Server IP address, port, username, password etc.) and follow below procedure.

- Config registered server and proxy server IP address and signaling port.  
(Support DNS for registered server and proxy server)

|                      |   |                   |                      |
|----------------------|---|-------------------|----------------------|
| Register Server Addr | <input type="text" value="sip.stanaphone.com"/> | Proxy Server Addr | <input type="text"/> |
| Register Server Port | <input type="text" value="5060"/>               | Proxy Server Port | <input type="text"/> |

- Config the username and password for registered server and proxy server.

|                   |   |                |                          |
|-------------------|---|----------------|--------------------------|
| Register Username | <input type="text" value="08911564"/>     | Proxy Username | <input type="text"/>     |
| Register Password | <input type="password" value="●●●●●●●●"/> | Proxy Password | <input type="password"/> |

- Config the phone number (Usually phone number is same with SIP account)  
Remark: due to the above register username is “client”, so the phone number

is different from SIP account)

|              |          |
|--------------|----------|
| Phone Number | 62281493 |
|--------------|----------|

- Config the domain realm (Usually it is same with registered server and proxy server IP address, Let it be blank)

|              |            |
|--------------|------------|
| Domain Realm | 10.1.1.139 |
|--------------|------------|

- Usually the option need to be selected, when you want to use SIP1..

|  |
|--|
| <input type="checkbox"/> Enable Register |
|--|

- Set SIP protocol as the default . All call will pass by SIP ...

|   |
|---|
| <input checked="" type="checkbox"/> SIP(Default Protocol) |
|---|

#### 4.6.2 IAX2 configuration

| IAX2[Unregistered] Configuration                           |  |
|--|--|
| IAX2 Server Addr   | server42.idefisk.com                             |
| IAX2 Server Port   | 4569   |
| Account Name   | fanvil005  |
| Account Password   | ••••••   |
| Phone Number   | 1006148  |
| Local Port   | 4569   |
| Voice mail number  | 0  |
| Voice mail text  | mail   |
| Echo Test number   | 1  |
| Echo Test text   | echo   |
| Refresh Time   | 60 Seconds                                       |
| <input checked="" type="checkbox"/> Enable Register        | <input checked="" type="checkbox"/> Enable G.729 |
| <input checked="" type="checkbox"/> IAX2(Default Protocol) |  |

Definition of each parameter described as below

|                        |   |
|------------------------|---|
| IAX Server Addr        | Set IAX2 register server IP address or domain   |
| IAX Server Port        | Default port is 4569  |
| Account Name           | Set IAX2 register server account username   |
| Account Password       | Set password of IAX2 register server account  |
| Phone Number           | Set assigned phone number (usually it is same with account name )   |
| Local Port             | Set local signal port , the default is 4569   |
| Voice mail number      | Use the number to replace the voice mail name that is letter format   |
| Voice mail text        | Set the voice mail name   |
| Echo Test number       | The number replace the Loop Back text number user dial the test number to check the IAX2 voice quality ,for testing work state.   |
| Echo Test text         | Loop back test text number  |
| Refresh Time           | Set expire time of IAX2 server register, default is 60 seconds  |
| Enable Register        | Configure enable/disable register   |
| IAX2(Default Protocol) | Enable or disable all call passing through IAX2 or not . If unchecked that means all call will use SIP protocol as default protocol.<br>Making a call: only can use IAX2 or SIP at one time by selecting which is default protocol<br>Receive a call:can receive call from IAX2 and SIP |
| Enable G.729           | Enable or disable the code G.729a/G729b . It is special for some PC software G729 compatibility.  |

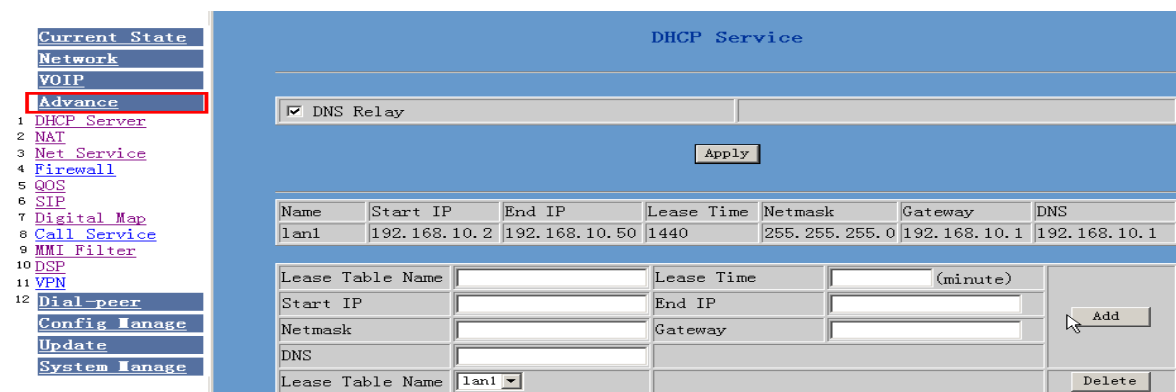

## 4.7 Advance

### 4.7.1 DHCP server configuration

When GW0220 work as a router, This config is for network device which connect to GW0220 LAN port.

DNS Relay : DNS relay acts as a forwarder between the DNS Clients and the DNS Servers,DNS relay is disigned for home/office networks where the users might want to dial into more than one Internet Service Provide (ISP)

| Name | Start IP     | End IP        | Lease Time | Netmask       | Gateway      | DNS          |
|------|--------------|---------------|------------|---------------|--------------|--------------|
| lan1 | 192.168.10.2 | 192.168.10.50 | 1440       | 255.255.255.0 | 192.168.10.1 | 192.168.10.1 |

Lease Table Name:  Lease Time:  (minute)

Start IP:  End IP:

Netmask:  Gateway:

DNS:

Lease Table Name:

DHCP server manage page.

User may trace and modify DHCP server information in this page.

**DNS Relay:** enable DNS relay function.

User may use below setting to add a new lease table.

**Lease Table Name:** Lease table name.

**Lease Time:** DHCP server lease time.

**Start IP:** Start IP of lease table.

**End IP:** End IP of lease table. Network device connecting to the GW0220 LAN port can dynamic obtain the IP in the range between start IP and end IP.

**Netmask:** Netmask of lease table.

**Gateway:** Default gateway of lease table

**DNS:** Default DNS server of lease table.

**Notice:** This setting won't take effect unless you save the config and reboot the device

### 4.7.2 NAT Configuration

This page is for NAT configuration ,such port forward ,DMZ .

Network Address Translation (NAT) provides a mechanism for a privately addressed network to access registered networks, such as the Internet,without requiring a registered subnet address. This eliminates the need for host renumbering and allows the same IP address range to be used in multiple intranets. With NAT, the inside network continues to use its existing private or obsolete addresses. These addresses are converted into legal addresses before

packets are forwarded onto the outside network.

| NAT Configuration  |                 |                  |   |
|--|-----------------|------------------|---|
| <input checked="" type="checkbox"/> IPsec ALG                            |                 |                  | <input checked="" type="checkbox"/> FTP ALG |
| <input checked="" type="checkbox"/> PPTP ALG                             |                 |                  |   |
| <input type="button" value="Apply"/>                                     |                 |                  |   |
| Inside IP  | Inside TCP Port | Outside TCP Port |   |
| Inside IP  | Inside UDP Port | Outside UDP Port |   |
| Transfer Type  | TCP             | Outside Port     |   |
| Inside Ip  |                 | Inside Port      |   |
| <input type="button" value="Add"/> <input type="button" value="Delete"/> |                 |                  |   |
| DMZ Table  |                 |                  |   |
| Outside IP   | Inside IP       |                  |   |

Advance NAT setting. Maximum 10 items for TCP and UDP port mapping.

**IPsec ALG:** Enable/Disable IPsec ALG;

**FTP ALG:** Enable/Disable FTP ALG;

**PPTP ALG:** Enable/Disable PPTP ALG;

**Transfer Type:** Transfer type using port mapping.

**Inside IP:** LAN device IP for port mapping.

**Inside Port:** LAN device port for port mapping.

**Outside Port:** WAN port for port mapping.

Click **Add** to add new port mapping item and **Delete** to delete current port mapping item.

### 4.7.3 NAT service configuration

| Net Service      |       |                   |     |
|------------------|-------|-------------------|-----|
| HTTP Port        | 80    | Telnet Port       | 23  |
| RTP Initial Port | 10000 | RTP Port Quantity | 200 |

#### 4.7.3.1

|           |    |
|-----------|----|
| HTTP Port | 80 |
|-----------|----|

Configure web browse port , the default is 80 port , if you want to enhance system safety , you'd better change it into non-80 standard port ;

Example: The ip address is 192.168.1.70 . you change the port value to 8090, the accessing address is http://192.168.1.70:8090

But if the value is 0 ,that imply it can not be configured by web browser.

#### 4.7.3.2

|             |    |
|-------------|----|
| Telnet Port | 23 |
|-------------|----|

Configure telnet port ,the default is 23 port. You can change the value to others .

Example: The ip address is 192.168.1.70 . you change the port value to 8023,  
the accessing address is telnet 192.168.1.70:8023

#### 4.7.3.3

|                  |       |
|------------------|-------|
| RTP Initial Port | 10000 |
|------------------|-------|

Enable RTP initial port configuration. It is dynamic allocation.

#### 4.7.3.4

|                   |     |
|-------------------|-----|
| RTP Port Quantity | 200 |
|-------------------|-----|

Configure the maximum quantity of RTP port. The default is 200 ;

| Leased IP Address | Client hardware Address |
|-------------------|-------------------------|
|-------------------|-------------------------|

Leased IP/MAC correspondence table of DHCP.The table will display all device getting ip address from GW0220 LAN port by DHCP .

**Note**

*The configuration on this page needs to be saved after modified and will go into effect after restarting.If the Telnet, HTTP port will be modified, the port is better to be set as greater than 1024,because the 1024 port system will save ports.*

※Set the HTTP port as 0 , then the http service will be disabled.

#### 4.7.4 Firewall

Firewall setting page. User may set up firewall to prevent unauthorized Internet users from accessing private networks connected to the Internet (input rule), or prevent unauthorized private network devices to access the internet.

Access list support two type limits: input\_access limit or output\_access limit. Each type support 10 items maximum.

GW0220 firewall filter is base WAN port. So the source address or input destination address should be WAN port IP address.

Configuration:

**in\_access enable** Enable in\_access rule

**out\_access enable** Enable out\_access rule

**Input/Output:** Specify current adding rule is input rule or output rule.

**Deny/Permit:** Specify current adding rule is deny rule or permit rule.

**Protocol Type:** protocol using in this rule: TCP/IP/ICMP/UDP.

**Port Range:** port range if this rule

**Src Addr:** Source address. can be single IP address or network address.

**Dest Addr:** Destination address. can be IP address or network address.

**Src Mask:** Source address mask. Indicate the source is dedicate IP if set to 255.255.255.255. Otherwise is network ID

**Des Mask:** Destination address mask. Indicate the source is dedicate IP if set to 255.255.255.255. Otherwise is network ID

**Example:**

Intention: Computer A can not ping computer B

Computer A connect with GW0220 LAN port

Computer A IP address is 192.168.10.2

GW0220 WAN port IP address is 192.168.0.187

GW0220 LAN port IP address is 192.168.10.1

Computer B IP address is 192.168.0.200

GW0220 firewall config

| Index | Deny/Permit | Protocol | Src Addr      | Src Mask        | Des Addr      | Des Mask        | Rate      |
|-------|-------------|----------|---------------|-----------------|---------------|-----------------|-----------|
| 0     | deny        | ICMP     | 192.168.0.187 | 255.255.255.255 | 192.168.0.120 | 255.255.255.255 | more than |

|               |                 |             |                 |
|---------------|-----------------|-------------|-----------------|
| Input/Output  | Output          | Deny/Permit | Deny            |
| Protocol Type | ICMP            | Port Range  | more than 0     |
| Src Addr      | 192.168.0.187   | Des Addr    | 192.168.0.120   |
| Src Mask      | 255.255.255.255 | Des Mask    | 255.255.255.255 |

### 4.7.5 QOS 802.1p Configuration

### QoS Configuration

|                                      |                |  |           |
|--------------------------------------|----------------|--|-----------|
| <input type="checkbox"/> VLAN Enable |                | <input type="checkbox"/> DiffServ Enable |           |
| VLAN ID                              | 256 (0 - 4095) | 802.1P Priority                          | 0 (0 - 7) |
| DiffServ Value                       | 0x b8          |  |           |

QoS Control based on 802.1p for different IP users. The QoS is used to mark the network communication priority in the data link/MAC sub-layer. GW0220 will sorted the packets using the QoS and sends it to the destination. QoS provides service classes for accessing traffics in Internet.

DiffServ replace IP type of service . the field change to DS field . It take IP service infomation that is necessary. It is strict three layer technology, it do not involve the low layer tranfer technology

#### 4.7.6 SIP2 and STUN configuraton

| Advance SIP Configuration                        |                                     |  |   |
|--|-------------------------------------|--|---|
| Public [Registered]                              |                                     | Private [Unregistered]                   |   |
| STUN NAT Transverse [FALSE]                      |                                     |  |   |
| STUN Server Addr                                 | <input type="text"/>                | STUN Server Port                         | <input type="text" value="3478"/>           |
| Private Register                                 | <input type="text"/>                | Private Proxy                            | <input type="text"/>                        |
| Register Port                                    | <input type="text" value="5060"/>   | Proxy Port                               | <input type="text"/>                        |
| Register Username                                | <input type="text"/>                | Proxy Username                           | <input type="text"/>                        |
| Register Password                                | <input type="text"/>                | Proxy Password                           | <input type="text"/>                        |
| Private Domain                                   | <input type="text"/>                | Expire Time                              | <input type="text" value="60"/> Seconds     |
| Private Number                                   | <input type="text"/>                | STUN Effect Time                         | <input type="text" value="50"/> Seconds     |
| Private Server Type                              | <input type="text" value="common"/> | Private User Agent                       | <input type="text" value="Voip Phone 1.0"/> |
| <input type="checkbox"/> Enable Private Register |                                     | <input type="checkbox"/> Enable SIP Stun |   |

**Public [Unregistered] Private [Unregistered]**

To show the phone whether has been registered on public server or private server.  
To show STUN working state

##### 4.7.6.1 SIP STUN Configuration

STUN can support SIP terminal's penetration to NAT in the inner-net. In this way , as long as there is conventional SIP proxy and a STUN server placed in the public net, it will do; but STUN only supports three NAT modes : FULL CONE, restricted, port restricted.

STUN Server Addr

IF you have stun server .please input stun server address here.

STUN Server Port

The STUN server default port is 3478

STUN Effect Time   
minute

The unit is minute. if you have STUN server .please input interval time for STUN`S detection on NAT type.

Enable SIP Stun

Configure enable/disable SIP STUN ; if you have stun server .please enabe the option.

#### 4.7.6.2 Private server(SIP2) configuration.

|   |               |  |                |
|---|---------------|--|----------------|
| Private Register  | 192.168.0.222 | Private Proxy                            |                |
| Register Port   | 5060          | Proxy Port                               |                |
| Register Username   | 212           | Proxy Username                           |                |
| Register Password   | •••           | Proxy Password                           |                |
| Private Domain  |               | Expire Time                              | 60 Seconds     |
| Private Number  | 212           | STUN Effect Time                         | 50 Seconds     |
| Private Server Type   | common        | Private User Agent                       | Voip Phone 1.0 |
| <input checked="" type="checkbox"/> Enable Private Register |               | <input type="checkbox"/> Enable SIP Stun |                |

Specific configuration parameter has the same meaning with public server.

Enable Private Register

Configure permit/deny private server register ;

**Note: about how to use SIP2 ,Please refer to the Dial peer chapter.**

### 4.7.7 Digital map configuration

#### 4.7.7.1 Fixed digital map

Digital Map Configuration

End with “#”

Fixed Length

Time out  (3--30)

End With “#”:   Checked : # for the end of dialing. User dial 200300# .phone send 200300 to server immediately . server receive 200300  
 Unchecked : # like digital number .Example: User dial

#1966 , sever receive #1966

Fixed Length: When the length of the dialing match, the call will be sent.

Timeout: Specify the timeout of the last dial digit. The call will be sent after timeout

End with “#” , Fixed length , Time out these three option are not repulsion

**4.7.7.2 User define flexible Digital map table**

Digit map is a set of rules to determine when the user has finished dialing. Digital Map is based on some rules to judge when user end their dialing and send the number to the server. With digital map, users don't have to press '#' key or "call"key after dialing. If the number dialed matches some item in the digital map table, or it doesn't match with any item, this number will be sent out immediately. It is not like using dial peer . Using digital map won't change the number dialed, the number sent is the same as the number dialed.

X Represents any one number between 0 and 9.

Tn Represents the last digit timeout. here [ n ] represents the time from 0~9 second, it is necessary. Tn must be the last two digit in the entry. If Tn is not included in the entry, we use T0 as default, it means system will sent the number immediately if the number matches the entry.

. (Dot) represents any number and no length limit.

[ ] Number location value range . It can be a number range(such as [1-4]), or number is separated by comma such as [1,3,5],, or use a list such as [234]

**Example:**

- [1-8]xxx** Any 4 digits number between 1000 and 8999 sending out immediately
- 9xxxxxxx** any 8 digits number starting with 9 sending out immediately
- 911** after finishing dialing 911 ,it will send out immediately
- 99T4** after finishing dial 911, it will send out in 4 second
- 9911x.T4** any more than 5 digits length starting with 9911, sending out in 4 second .

Using digital map can be combined with dial peer . First digital map will

determine when the user finished dialing, then convert this number to the number actually sent according to "dial peer table".

| Dial-Peer |               |      |          |           |            |
|-----------|---------------|------|----------|-----------|------------|
| Number    | Destination   | Port | Alias    | Suffix    | Del length |
| 2887      | 192.168.0.155 | 5060 | no alias | no suffix | 0          |
| 98765432  | 192.168.0.155 | 5060 | no alias | no suffix | 0          |
| 911       | 192.168.0.155 | 5060 | no alias | no suffix | 0          |
| 99        | 192.168.0.155 | 5060 | no alias | no suffix | 0          |
| 9911234   | 192.168.0.155 | 5060 | no alias | no suffix | 0          |

When user dial 2887 or 98765432, 911, 99, 9911234, they will send out immediately. (digital map with dial peer)

#### 4.7.8 Call Service Configuration

##### Value added service configuration

On this page, user can set value added services such as hot-line, call forwarding, call transfer (CT), call-waiting service, three way call, blacklist, out-limit list and so on.

Call Service

---

|   |  |                      |  |
|---|--|----------------------|--|
| Hotline   | <input type="text"/>   |                      |  |
| Call Forward  | <input checked="" type="radio"/> Off <input type="radio"/> Busy <input type="radio"/> No Answer <input type="radio"/> Always |                      |  |
|   | Forward Number   | <input type="text"/> | Port <input type="text" value="5060"/> |
| <input type="checkbox"/> No Disturb                       | <input type="checkbox"/> Ban Outgoing  |                      |  |
| <input checked="" type="checkbox"/> Enable Call Transfer  | <input checked="" type="checkbox"/> Enable Call Waiting  |                      |  |
| <input checked="" type="checkbox"/> Enable Three Way Call | <input checked="" type="checkbox"/> Accept Any Call  |                      |  |
| <input type="text" value="10"/> No Answer Time(seconds)   |  |                      |  |

|            |                      |                                    |                                       |
|------------|----------------------|------------------------------------|---------------------------------------|
| Black List | <input type="text"/> | <input type="button" value="Add"/> | <input type="button" value="Delete"/> |
| Limit List | <input type="text"/> | <input type="button" value="Add"/> | <input type="button" value="Delete"/> |

##### 4.7.8.1 Hotline

|         |                      |
|---------|----------------------|
| Hotline | <input type="text"/> |
|---------|----------------------|

Configure hot-line number of the port. With this number of the port, this hot-line number will be dialed automatically as soon as off-hook and user can't dial any other number. If you do not use hotline, please let it be blank.  
Configuration example:

**Call Service**

|              |  |                                   |    |                      |      |
|--------------|--|-----------------------------------|----|----------------------|------|
| Hotline      | <input style="border: 1px solid red;" type="text" value="157"/>  | hotline number                    |    |                      |      |
| Call Forward | <input checked="" type="radio"/> Off <input type="radio"/> Busy <input type="radio"/> No Answer <input type="radio"/> Always |                                   |    |                      |      |
|              | Forward Number   | <input type="text"/>              | IP | <input type="text"/> | Port |
|              |  | <input type="text" value="5060"/> |    |                      |      |

**Dial-Peer**

| hotline number |               |      |          |           |            |
|----------------|---------------|------|----------|-----------|------------|
| Number         | Destination   | Port | Alias    | Suffix    | Del length |
| 157            | 192.168.0.157 | 5060 | no alias | no suffix | 0          |

### 4.7.8.2 Call feature

#### 4.7.8.2.1 Call forwarding.

Call Forward
  Off
  Busy
  Always

Call forward default is Disable. when  Off is selected , if the number dialed is engaged after the phone has received a call, then it will automatically transfer to the configured number according to the following picture (CF001 ) configuration.

when  No Answer is selected , if the phone do not receive the incoming call .it will automatically in  No Answer Time(seconds) forward to the configured number according to

the following picture (CF001 forward ) configuration. when  Always is selected , then the phone will directly transfer all incoming call to the number that had configured in advance like the picture showing.

Faraway Protocol: SIP
 
 Number
 
 IP
 
 Port

Picture:CF001

**Note:**

**1 Number can be sip server extension number or DID number (any PSTN number)**

**2 the function have no relationship with the option  Enable Call Transfer that enable or disable**

No Disturb

If it is enabled . the phone will not ring when there is a incoming call . DND, do not disturb, enable this option to refuse any calls.

Ban Outgoing

Enable this to forbid outgoing calls.

No Answer Time(seconds)

The unit is second. no answer call forward time setting.

#### 4.7.8.2.2 Call Waiting configuration

Enable Call Waiting

Configure enable/disable call waiting service ; After it is enabled, user hold calls of the other party by <FLASH >button, by pressing <FLASH >button again, the call can go back to the previous call. If you want to use three way conference , this option must be enabled.

#### 4.7.8.2.3 Call transfer configuration

Enable Call Transfer

It is for enabling or disabling . If it is enabled, when user A are talking with user B , A press <FLASH> button on the normal phone ,After dialing dial \* then dial the third party number (C user) directly. the phone will transfer the calls to C. The result is C phone will ring (A will hang up) . User C pick up phone then user B will talk with C .

Operating process :

<FLASH> button +\* + third party number

#### Example:

A are talking with B .

A click FLASH button (holding B line ) .then dial \* **user C number** .

#### 4.7.8.2.4 Three way conference call

Enable Three Way Call

Configure enable/disable three way call ; When user A are talking with user B as the call origination , user A click <FLASH> button on the normal phone to hold user B line and then dial the third party user C. **after A talk with C** , User A click<FLASH> button again to recover the talk with user B. At this time user A press \* key to make C into the three way conference .

Operating process :

<FLASH> button + third party number+ <FLASH> button+ \*

#### Example:

A are talking with B .

A click FLASH button (holding B line ) .then dial C number .

A will talk with C .

A click FLASH button again (holding C line ), and A dial \*

A 、 B、 C make the three party conference sucessfully now

#### 4.7.8.2.5 Black List

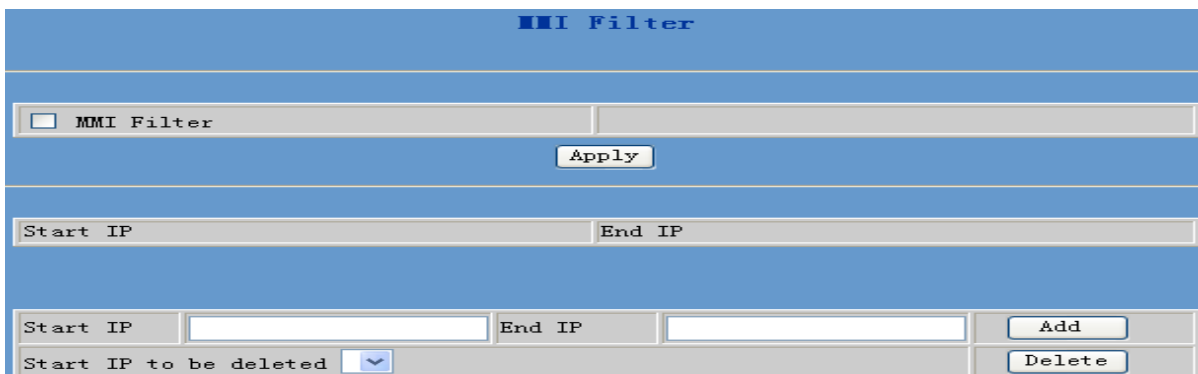

Incoming call in these phone numbers will be refused. It is for precluding incoming communication like Call ID. If user don't want to answer a certain phone number, please add this phone number to the list, and then this number will be unable to get through the phone.

#### 4.7.8.2.6 Limit list

Outgoing calls with these phone numbers will be refused for example, if user don't want the phone to dial a certain number, please add the number to this table, and the user will be unable to get through this number.

#### 4.7.9 MMI Filter

MMI filter is used to make access limit toGW0220.

When MMI filter is enable. Only IP address within the start IP and end IP can access GW0220.

#### 4.7.10 DSP configuration

On this page, user can set speech coding , IO volume control, cue tone standard, caller ID standard and so on.

| DSP Configuration            |             |                                      |         |
|------------------------------|-------------|--------------------------------------|---------|
| Coding Rule                  | g711Alaw64k | Signal Standard                      | CHINA   |
| Input Volume                 | 0 (0-3)     | Output Volume                        | 0 (0-3) |
| G729 Payload Length          | 10 ms       | DTMF Payload Type                    | 101     |
| <input type="checkbox"/> VAD |             | Fax Mode                             | T.38    |
|                              |             | <input type="button" value="Apply"/> |         |

### Configuration Explanation :

|             |             |
|-------------|-------------|
| Coding Rule | g711Ulaw64k |
|-------------|-------------|

Configure Coding Rule according to network bandwidth; support G.711a/u G.729

|                 |       |
|-----------------|-------|
| Signal Standard | China |
|-----------------|-------|

Configure Signal Standard according to country's phone voice;

|                     |      |
|---------------------|------|
| G729 Payload Length | 20ms |
|---------------------|------|

Normally, G729 Payload Length don't need be changed into 10 ms;The voice payload size can be represented in terms of the codec samples. For example, a G.729 voice payload size of 20 ms (two 10 ms codec samples) represents a voice payload of 20 bytes [ (20 bytes \* 8) / (20 ms) = 8 Kbps ]

|               |         |
|---------------|---------|
| Output Volume | 5 (1-9) |
|---------------|---------|

Handset out volume.

|              |         |
|--------------|---------|
| Input Volume | 5 (1-5) |
|--------------|---------|

Handset input volume

|                              |
|------------------------------|
| <input type="checkbox"/> VAD |
|------------------------------|

Voice Activity Detection

When selecting code G729 .and VAD is unchecked. That means g729a

When selecting code G729 .and VAD is checked. That means g729b

GW0220 support standard T.38 and fax bypass. Support fax in encryption (example server type is tongshan,and enable signal and rtp encryption)

## 4.8 Dial peer

Number IP table configuration

Function of number IP table is one way to implement the phone's calling online, and the calling of the phone will be more flexible by configuring the number IP table. For example, user know the other party's number and IP and want to make direct call to the party by point-to-point mode : the other party's number is 1234 , make a configuration of 1234 directly ,then the phone will send the called number1234 to the corresponding IP address ; Or set numbers with prefix matching pattern , for example, user want to make a call to a number in a certain region ( 010 ) , user can configure the corresponding number IP as 010T— protocol— IP , after that, whenever user dial numbers with 010 prefix( such as 010 - 62201234),the call will be made by this rule.

Bases on this configuration , we can also make the phone use different accounts and run speed calling without manual swap. When making deletion or modification, select the number first and click load, then click Modify and complete the operation.

Display of calling number IP image list.

| Dial-Peer |                 |      |          |           |            |
|-----------|-----------------|------|----------|-----------|------------|
| Number    | Destination     | Port | Alias    | Suffix    | Del length |
| 157       | 192.168.0.157   | 5060 | no alias | no suffix | 0          |
| 187       | 192.168.0.187   | 5060 | no alias | no suffix | 0          |
| 9T        | 255.255.255.255 | 5060 | del      | no suffix | 1          |
| 8T        | 0.0.0.0         | 5060 | all:0755 | no suffix | 0          |
| 010T      | 0.0.0.0         | 5060 | rep:8610 | no suffix | 3          |
| 6T        | 192.168.0.187   | 5060 | no alias | 12345     | 0          |
| 741       | 192.168.0.187   | 5060 | no alias | 999       | 0          |

Click Add , the following figure will be shown at the lower part of the page.

|                             |                      |
|-----------------------------|----------------------|
| Phone Number                | <input type="text"/> |
| Destination<br>(optional)   | <input type="text"/> |
| Port (optional)             | <input type="text"/> |
| Alias (optional)            | <input type="text"/> |
| Suffix (optional)           | <input type="text"/> |
| Delete Length<br>(optional) | <input type="text"/> |

Phone Number

It is to add outgoing call number, there are two kinds of outgoing call number setup : One is exactitude matching , after this configuration has been done, when the number is totally the same with the user's calling number, the phone will make the call with this number's IP address image or configuration; Another is prefix matching( be equivalent to PSTN's district number prefix function ) ,if the previous N bits of this number are the same with that of the user's calling number(the prefix number length) , then the phone will use this number's IP address image or configuration to make the call. When configuring the prefix matching, letter "T" should be added behind the prefix number to be distinguished from the exactitude matching.

Call Mode

Configure the calling line route : SIP and lifeline for selecting.

Destination

Configure destination address , if it is point-to-point call , then input the opposite terminal's IP address, it can also be set as domain name and resolved the specific IP address by DNS server of the phone. If no configuration has been made, then the IP will be considered as 0.0.0.0. This is an optional configuration item.

Port (optional)

Configure the other party's protocol signal port, this is optional configuration item : when nothing is input, then the default of sip protocol is 5060 ; lifeline required no configuration of this item, shown as 0.

Alias (optional)

Configure alias , this is optional configuration item : it is the number to be used when the other party's number has prefix ; when no configuration has been made, shown as no alias.

- add:** xxx    add xxx before number. in this way it can help user save the dialing length;
- all:** xxx    the number is all replaced by xxx; speed dialing can be implemented, for example, user configure the dialing number as 1, with the configuration "all" the actual calling number will be replaced;
- del**        delete **n** bit in the front part of the number, **n** can be decided by the replacing length: this configuration can decide the protocol for appointed number;
- rep:** xxx    **n**-bit in the front part of the number will be replaced. **n** is decided by the replacing length.

Suffix (optional)

Configure suffix , this is optional configuration item : it is the additive dial-out number behind the number; when no configuration has been made, shown as no suffix ;

## Example 1

T mean any length digit number.

Destination is 255.255.255.255 that mean calling out through SIP2 server.

Destination is 0.0.0.0 that mean calling out through SIP1server

Config page

Explanation

Example

|                          |                 |
|--------------------------|-----------------|
| Phone Number             | 9T              |
| Call Mode                | sip             |
| Destination (optional)   | 255.255.255.255 |
| Port (optional)          |                 |
| Alias (optional)         | del             |
| Suffix (optional)        |                 |
| Delete Length (optional) | 1               |

That means Any digits number starting with 9 pass throught SIP2 server.

User dial 93333  
SIP2 server receive 3333

Here alais is **del**

Delete Length is 1 that means the phone will delete the first number before send number to server

|                          |              |
|--------------------------|--------------|
| Phone Number             | 2            |
| Call Mode                | sip          |
| Destination (optional)   |              |
| Port (optional)          |              |
| Alias (optional)         | all:33334444 |
| Suffix (optional)        |              |
| Delete Length (optional) |              |

It can be used for speed calling

User dial 2

The number user dialed will be replaced fully by the number that is behind all: )

Sip1 server receive 33334444

Here alias is **all**: (not all)

|                          |          |
|--------------------------|----------|
| Phone Number             | 8T       |
| Call Mode                | sip      |
| Destination (optional)   |          |
| Port (optional)          |          |
| Alias (optional)         | add:0755 |
| Suffix (optional)        |          |
| Delete Length (optional) |          |

It can be used to add local area or prefix.before sending out.

User dial 8309

It saves user dialing number .

SIP1 server receive07558309

Here alias is **add**: (not add)

|                          |          |
|--------------------------|----------|
| Phone Number             | 010T     |
| Call Mode                | sip      |
| Destination (optional)   |          |
| Port (optional)          |          |
| Alias (optional)         | rep:8610 |
| Suffix (optional)        |          |
| Delete Length (optional) | 3        |

user want to dial PSTN ( 010 6228 ) by SIP1 , while actually the called number should be 86106228 , then we can configure called number

User dial 010 6228

SIP1 server receive8610 6228

as 010T, then rep : 8610 , and then set the replacing length as 3. So that when user make a call with 010 prefix, the number will be replaced as 8610 plus the number and then sent out.

Relace the number that user dialed before sending to SIP1 server.

Here alias is rep:(not rep)

|                          |      |
|--------------------------|------|
| Phone Number             | 147  |
| Call Mode                | sip  |
| Destination (optional)   |      |
| Port(optional)           |      |
| Alias(optional)          |      |
| Suffix(optional)         | 0011 |
| Delete Length (optional) |      |

this is optional configuration item.it is to add number behind the number user had dialed. when no configuration has been made, shown as no suffix

User dial 147  
Sip1 server receive 147 0011

**Example 2**

| Dial-Peer |                 |      |          |           |            |
|-----------|-----------------|------|----------|-----------|------------|
| Number    | Destination     | Port | Alias    | Suffix    | Del length |
| 20T       | 0.0.0.0         | 5060 | no alias | no suffix | 0          |
| 200T      | 255.255.255.255 | 5060 | no alias | no suffix | 0          |

- When user dial 200 , It will pass through SIP2
- When user dial 2009 , It will pass through SIP2
- When user dial 20096, It will pass through SIP2
- When user dial 201, It will pass through **SIP1**
- When user dial 20, It will pass through **SIP1**

**Example 3 (about lifeline )**

| Dial-Peer |           |             |      |          |           |            |
|-----------|-----------|-------------|------|----------|-----------|------------|
| Number    | Call Mode | Destination | Port | Alias    | Suffix    | Del length |
| *T        | lifeline  | 0.0.0.0     | 0    | no alias | no suffix | 0          |

Image of \*T means when user connect PSTN line to the lifeline port, user could make PSTN call by add a “\*” before the calling number.

| Digital map table    |        |
|----------------------|--------|
| Rule:                |        |
| 1                    |        |
| 22                   |        |
| *                    |        |
| <input type="text"/> | Add    |
| 22                   | Delete |

| Dial-Peer |           |             |      |          |           |            |
|-----------|-----------|-------------|------|----------|-----------|------------|
| Number    | Call Mode | Destination | Port | Alias    | Suffix    | Del length |
| *T        | lifeline  | 0.0.0.0     | 0    | no alias | no suffix | 0          |
| 1         | lifeline  | 0.0.0.0     | 0    | no alias | no suffix | 0          |
| 22        | lifeline  | 0.0.0.0     | 0    | no alias | no suffix | 0          |

Phone number = \*T

Call mode =lifeline

When user dial \* ,there is a second dial tone from the pstn line . then dial as directly using PSTN line.

Phone number = 1

Call mode =lifeline

When user dial 1 ,there is a second dial tone from the pstn line . then dial as directly using PSTN line.

Phone number = 22

Call mode =lifeline

When user dial 22,there is a second dial tone from the pstn line . then dial directly as using PSTN line.

## Example 4

### IP to IP calling

“Peer to Peer” calling mode: direct make calls and no need to set phone number thru proxy server (user could refer to Dial peer setting on web configuration charter).The phone should be operated under following condition (satisfy one option)

- Requirement 1 both two GW0220 are assigned the public IP address individually
- Requirement 2 both two GW0220 using private IP address should be on the same LAN.

If A dial number 187 , A can talk with B . If B dial number 155 , B can talk with A

A phone IP address 192.168.0.155  
in dial peer config page

|                             |  |
|-----------------------------|--|
| Phone Number                | <input type="text" value="187"/>           |
| Call Mode                   | <input type="text" value="sip"/>           |
| Destination<br>(optional)   | <input type="text" value="192.168.0.187"/> |
| Port(optional)              | <input type="text"/>                       |
| Alias(optional)             | <input type="text"/>                       |

## 4.9 Config Manage (Save and Clear configuration)

**Notice:** clear config in admin mode, all settings restores to factory default; clear config in guest modem, all settings except sip, advance sip restore to factory default.

### 4.9.1 Save Config

Once change is made, Users should save the modified configuration to take effect, otherwise the IP Phone will go back to the last saved setting after phone reboot.

The interface of “Save Config” as below, please follow the four steps below to config.

Enter “Config Manage” Menu → “Save Config” Submenu → Click “Save” Button → Return to “Current State” Web page

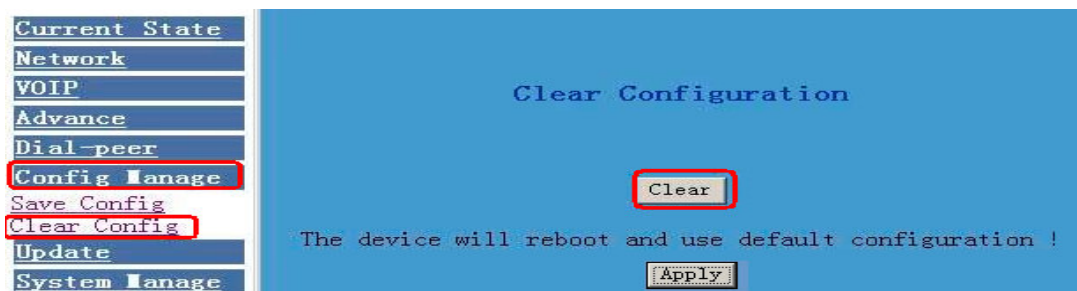

### 4.9.2 Clear Config

There are four method to clear config(set factory default), web 、 telnet 、 post mode、 keypad.If the IP Phone doesn't work properly after modifying config, users can clear all modified config on “Clear Config” web page. The phone will clear all

modified config and restore the default factory configuration. (Default network type for WAN is DHCP mode; default LAN IP address is 192.168.10.1)

Process Please follow the below steps to clear config:

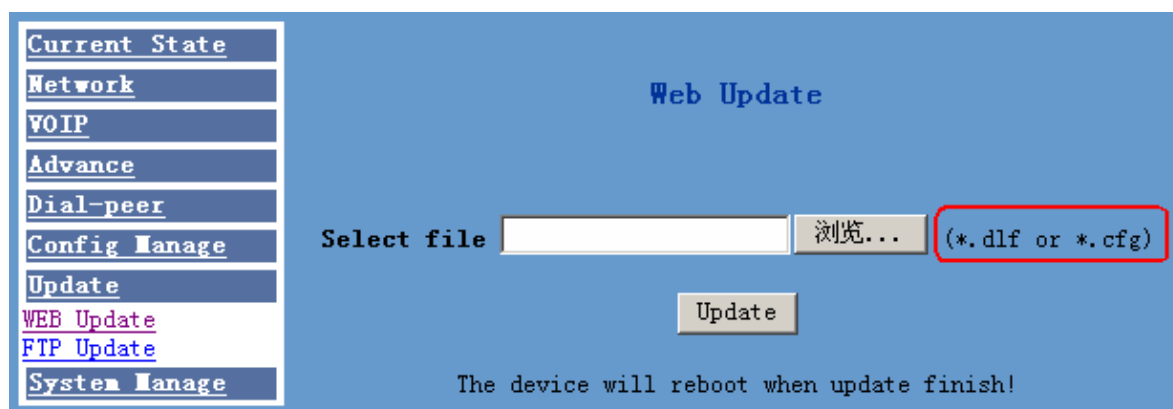

Enter “Config Manage” Menu →“Clear Config” →Click “Clear” Button →show “Submit Success” info on screen →Click “Return” button

## 4.10 Firmware Upgrade

### 4.10.1 Web Update

On this page, user can select the upgrade document (firmware or config file) from hard disk of the computer directly to run the system upgrade. After upgrade completed , reset the phone and it will be usable immediately. **Firmware format is \*.dlf as suffix**

STEP:

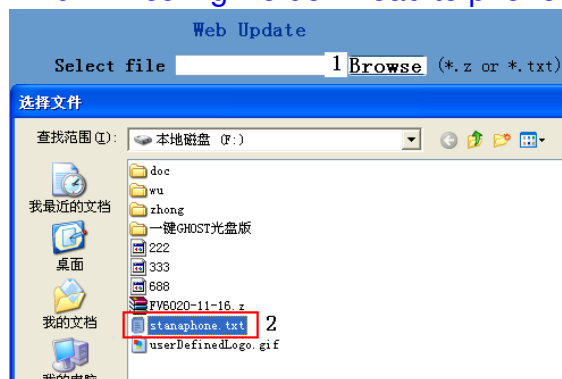

Enter Update menu →WEB Update submenu→ click “browse” button→ download upgrade document from hard disk (firmware or config file provided by manufacturer) → click “Update” button →reboot IP phone to go into effect

#### 4.10.1.1 firmware update

STEP:

Enter Update menu →WEB Update submenu→ click “browse” button→ download upgrade document from hard disk (firmware provided by manufacturer) → click “Update” button →reboot IP phone to go into effect

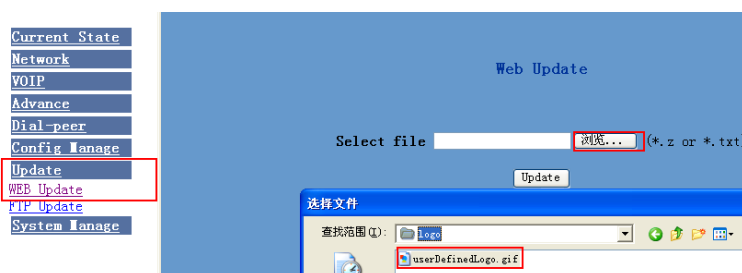

#### 4.10.1.2. config file download to phone

Commonly , set one phone all parameter needed .then download the phone config file to your FTP server (PC run a FTP software).

So when set another phone , download the config file to new phone for saving time .

#### 4.10.1.3. download user-defined web logo

After updating successfully ,It is as the below.

Web logo format:

Picture format should be gif

Picture size should be less than 64KB.

Length should be less than 130 pixel

Width should be less than 48 pixel

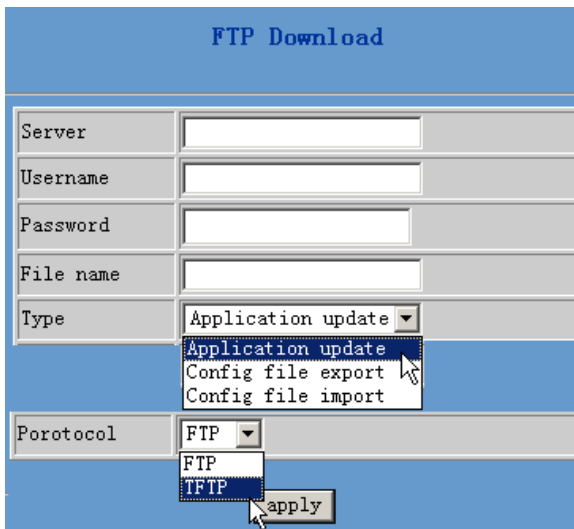

Logo name should be userDefinedLogo.gif. Other name can not be certificated

**Note:**

*Under system upgrade progress, GW0220 may not be restarted normally due to some system reason (e.g. electricity shut off), users can re-download under post mode.*

**4.10.2 FTP and TFTP Update**

Users can download upgrade documents or lead in configuration files thru FTP or TFTP mode. Please make sure export and import rights are authorized by FTP or TFTP server before using FTP update way.

**Definition of each parameter described as below**

|           |   |
|-----------|---|
| Server    | Set IP address for upload or download FTP/ TFTP server  |
| Username  | Set username of the upload or download FTP server. If user select TFTP mode, no need to input username and password   |
| Password  | Set upload or download of FTP server password   |
| File name | Set file name for system upgrade documents or system configuration files. system file take .Z as suffix , configuration files take .cfg as suffix ;   |
| Type      | Config export/import/upgrade file type [three options]: “Application update” is system documents upgrade<br>“Config file export” is export configuration files to server<br>“Config file import” is import configuration files to gateway |
| Protocol  | Set transport protocol type [two options]:FTP and TFTP  |

**STEP:**

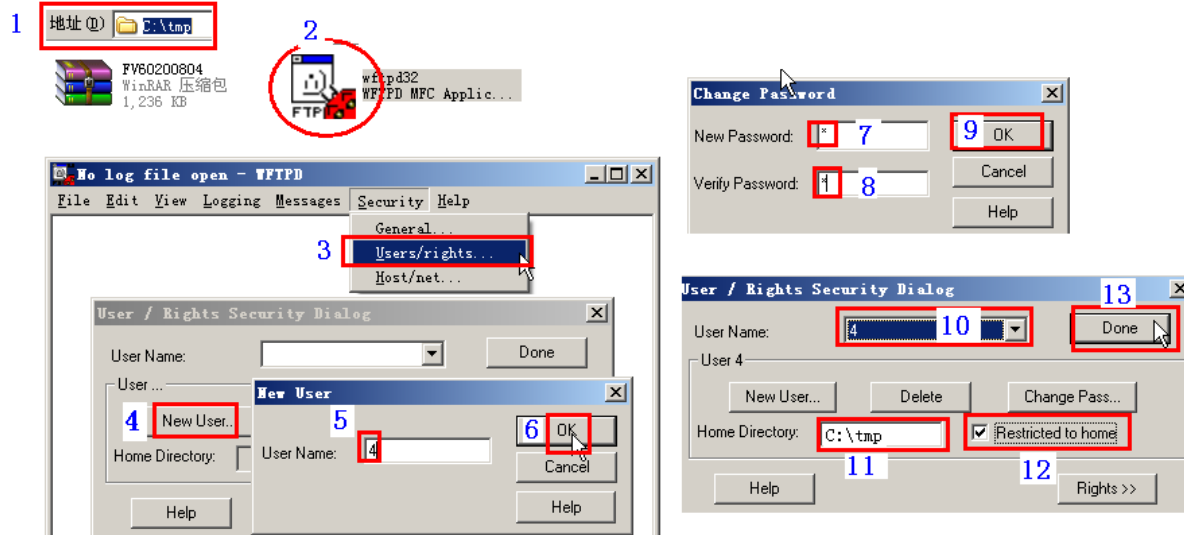

Enter Update menu →FTP Update submenu→ Config FTP/TFTP server → Config username and password of FTP server (if select TFTP mode, please skip this step) →key in file name → choosing file type from the dropdown menu→ choosing protocol type

Example: (export config file)

1 FTP

<1> Copy Wftpd32 software and GW0220 Firmware into a new Folder ( example c:/tmp)

<2> Run wftpd32.exe. Set a user name and password for GW0220 ftp updating  
The process is like the below picture showing from step 1 to setp 13.

| <p>After it update successfully. You will find the new version in Current State</p>  | <p>After you click apply , you can find the file that it had download to your pc &lt;c:\tmp&gt;</p> |              |               |   |                |   |           |              |      |                    |              |      |   |        |              |               |           |          |            |              |               |   |                    |          |        |                  |  |  |               |  |  |  |  |

### 4.10.3 autoupdate

Auto update config file from server by FTP or TFTP. When the phone reboot ,it will automatically connect to your server to download the config file. After downloading successfully ,The phone will reboot.

| Auto Update Server Configuration     |   |
|--------------------------------------|---|
| Server Address                       | <input type="text" value="0.0.0.0"/>                                      |
| Username                             | <input type="text" value="user"/>   |
| Password                             | <input type="password" value="••••"/>                                     |
| Config File name                     | <input type="text" value="conf"/>   |
| Config Encrypt Key                   | <input type="text"/>  |
| Protocol Type                        | <input type="button" value="FTP"/><br><input type="button" value="TFTP"/> |
| <input type="button" value="apply"/> |   |

**Server Address** your FTP or TFTP server address.

**Username** FTP server login user name . If using TFTP , needn't fill anything.

**Password** FTP server login user password. If using TFTP , needn't fill anything.

**Config File name** The name of config file in FTP or TFTP server .

If "config file name " is unfilled means the phone will auto search the right config file from FTP /TFTP server by MAC address matching.

**Config Encrypt Key** If the config file is encrypted. need to fill in the encrypt key.  
config file support aes encryption (The Advanced Encryption Standard) 64 . After download config file to phone , the phone will auto make decryption

**Protocol Type** update protocol selecting, Support FTP and TFTP protocol.

## 4.11 System Manage

System manage include account manage,syslog config,time config,reboot.

### System Manage

[Account Manage](#)

[Syslog Config](#)

[Time Config](#)

[Reboot](#)

### 4.11.1 Account Manage (maximum 5 account )

Users can edit users (add or delete) account and modify existing users' authority on this web page.

| User Name | User Level |
|-----------|------------|
| admin     | Root       |
| guest     | General    |

User name:   
 User level:   
 Password:   
 Confirm:

Definition of each parameter described as below

- User Name                      List existing phone user account name
- User Level                      Show existing user account level [two option]:Root and General: Root level users have the right to modify config; General level users have the right to read-only
- Add                              Add user account to IP phone
- Delete                            Delete increased user account
- Modify                            Modify increased user level and password

Operation Example

- **Add one new account**

Click “Add” button →input User name (No-Modify) →Choosing User level from dropdown menu →set new user password →confirm password →submit the new account info by clicking “submit” button →show “submit success” on screen →return to account configuration interface by clicking “Return” button

User name:   
 User level:   
 Password:   
 Confirm:

- **Delete increased account**

Choosing the account need to del from dropdown menu→ Delete account by pressing “Delete button” →show “Submit Success” on screen

- **Modify increased account (For Root-level user account only)**

Choosing the modified account →enter below interface →modify user level or password →click “Submit” button to submit the modification

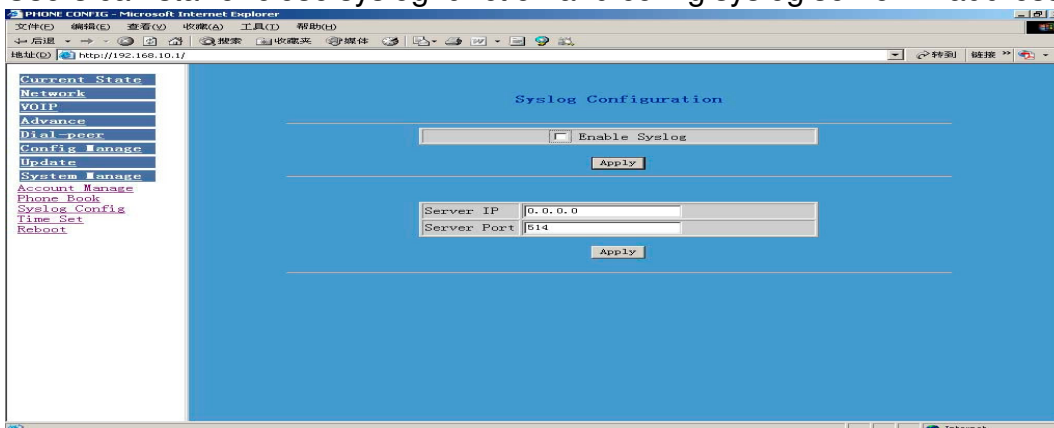

Owing to the phone's default account : accounts of the administrator level-admin account and the ordinary level - guest account are all weak account and weak password, the username and password will be easily to guess on public network, so the user had better modify the administrator and ordinary user.

Enter with manager level when making modification , create a administrator account and a browse account (you'd better not set the name as admin, administrator, guest, etc.) ,set password and then save configuration ,entering with new manager account, delete default manager and browse account and save configuration , security will be enhanced!

### 4.11.2 Syslog Configuration

Users can star or close syslog function and config syslog server IP address & port.

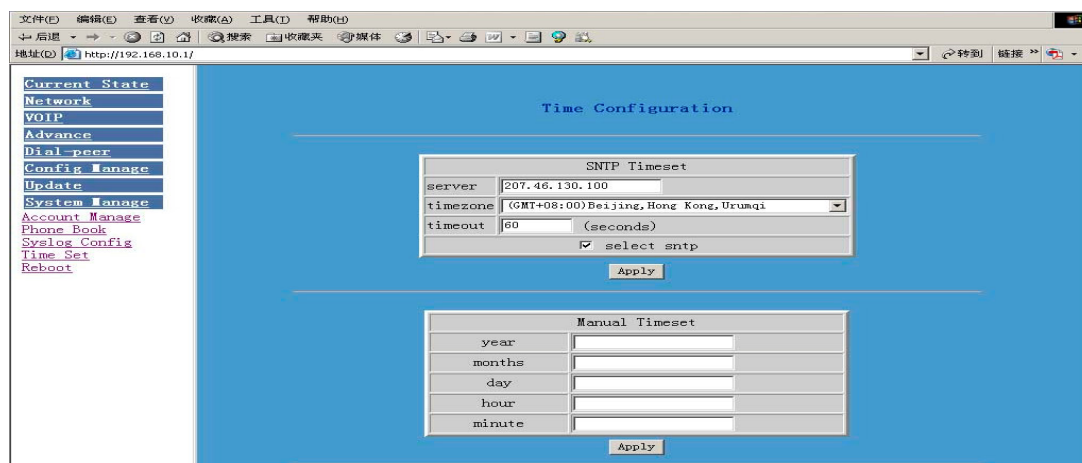

Definition of each parameter described as below

|               |   |
|---------------|---|
| Enable Syslog | Config enable/disable syslog function, choose it and then click "Apply" button to go into effect        |
| Server IP     | Config syslog server IP address   |
| Server Port   | Config syslog server port, click " Apply" button after inputting server IP & server port to take effect |

### 4.11.3 Time Set

Setting time zone and SNTP (Simple Network Time Protocol) server according to users location, users could manual adjust date and time on this web page.

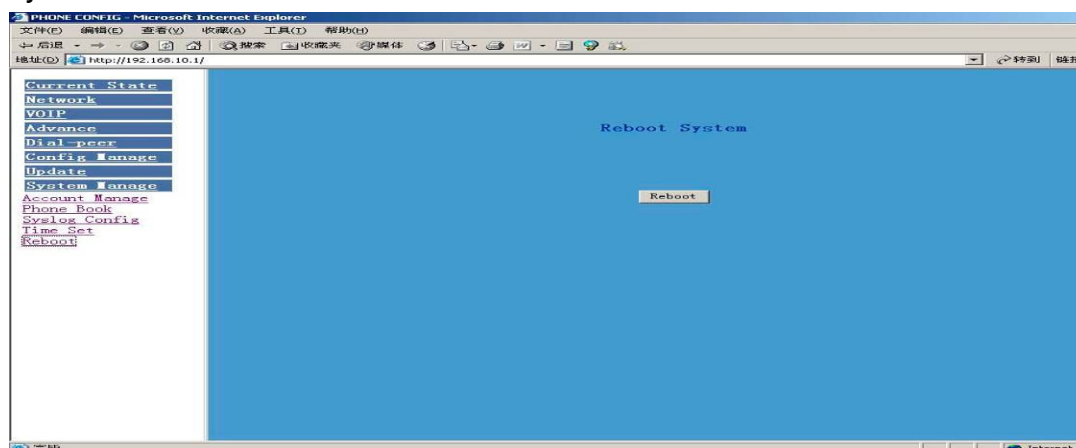

Definition of each parameter described as below

|                 |   |
|-----------------|---|
| Server          | SNTP server IP address  |
| Time zone       | Set time zone according to users location, Beijing time zone is GMT:+8:00                     |
| Timeout         | use for socket calls which will block while doing the SNTP query, default value is 60 seconds |
| Manual Time set | Manual set date and time  |

#### 4.11.4 System Reboot

Once any change of phone configuration is made, users need to reset IP phone to go into effect. Users should save the modified configuration before system reboot, otherwise the phone system configuration will go back to last saved setting. The system reboot interface as below

## 5 Default Factory Setting

- Gain IP address thru DHCP mode, WAN Port static IP is 192.168.1.179, LAN port IP is 192.168.10.1. Default is to start the DHCP service and NAT function.
- Default communication protocol is to use SIP, SIP port is 5060
- Default HTTP port is 80, Telnet port is 23
- Default number end is “#” button
- Default user account is admin and guest

## 6 Configuration by phone

We have provide some command to config GW0220 by phone. We can connect one analog phone to “Phone” interface. We can input following command by Handfree or Handset.

|                  |   |
|------------------|---|
| Input #****      | Reboot Device;                                    |
| Input #*000      | Clear configuration;                              |
| Input #*100      | Gateway work at Static mode                       |
| Input #*101      | Gateway work at DHCP mode                         |
| Input #*102      | Gateway work at PPPoE mode                        |
| Input #*103      | Gateway work at Bridge mode                       |
| Input #*104      | Gateway work at Router mode                       |
| Input #*111      | Get the IP address of Gateway by voice message    |
| Input #*222      | Get the Number of Gateway by voice message        |
| Input ip address | #*50 ip address      example : #*50192*168*123*85 |
| Input mask       | #*51 mask address    example : #*51255*255*255*0  |
| Input gateway    | #*52 gateway ip      example : #*52192*168*123*1  |

## 7 Telnet configuration

### 7.1 Config Procedure

- Input command “cmd” on Run submenu under PC START menu, and then key in “telnet phone-IP-address” enables users to config IP phone thru telnet.
- Input username and password, both default username and password of Administrator account are “admin”
- Config IP Phone through command lines

**Note:**

- 1. We suggest users to config IP Phone thru web browser instead of keypad or telnet.*
- 2. After any change of configuration, please remember to make “write” command to save changes and then input “reload” command to reboot IP phone to take effect.*

### 7.2 Telnet basic Introduction

#### 7.2.1 Basic structure

User may use telnet command to access and manage gateway.

GW0220 adopts tree structure for telnet. Every node contains its sub-nodes or local command. User can type “help” or “?” whenever to see sub-nodes and all local command under current node.

Besides local command, there are some global commands can be used in each node.

#### 7.2.2 Basic command

Logout: exit telnet mode.

Write: save current settings.

Type sub-nodes name in current node to switch to sub-node.

Type “!” or “exit” in current node to return to parent-node.

Type “help” or “?” can see all sub-nodes and all local command under current node, every help item has comments such as <command> or <node> to distinguish sub-nodes and local command. Type “help” or “?” in command can see all parameters using in this command.

When typing node name or command, user no need to key the full name, use TAB button will make it more efficient.

There are two types in command parameters: optional and required. “required” parameter use “-” as prefix and “optional” use “\_” as prefix. User may type “-” or “\_” then press TAB button for complementarily.

### 7.3 Global Command

Global command is available under all nodes, GW0220 support following commands.

| Command Name | Command function   | Example                     |
|--------------|--|-----------------------------|
| chinese      | Set the language of help prompt info to Chinese  | #chinese                    |
| clear        | Clear screen   | #clear                      |
| english      | Set the language of help prompt info to English  | #english                    |
| exit         | Go back to upper level of node   | #exit                       |
| help         | 1.Display help prompt info<br>2.Display all subnode under current node and local command | 1 . #help ping<br>2 . #help |
| history      | Display the history info for inputting command   | #history                    |
| logout       | Exit telnet config interface   | #logout                     |
| ping         | One test program using to check network or program availability                          | #ping www.server.com.       |
| tree         | Print out the tree structure of current node   | #tree                       |
| who          | Display current users login to PC  | #who                        |
| Write        | Save configuration to flash  | #write                      |
| Reload       | Reboot IP phone  | #reload                     |

### Common Network command

| Command Name    | Command function  | Example                 |
|-----------------|---|-------------------------|
| ping            | The same with above stated  | #ping www.server.com    |
| tracert         | Print out the network path  | #tracert www.server.com |
| show basic      | Print current configuration status table  | #show basic             |
| show ip route   | Print phone Router table  | #show ip route          |
| show ip arp     | Print phone arp table   | #show ip arp            |
| show ip netstat | Run Netstat program   | #show ip netstat        |
| telnet          | telnet another user host  | #telnet 192.168.1.2     |
| Set default     | Clean phone configuration modification and restore default except network configuration | #setdefault             |
| Set all default | Clean all configuration and restore default manufacturing setting                       | #setdefault all         |

## 7.4 Net configuration

### 7.4.1 LAN interface settings

**Path:** <config-interface-fastethernet-lan>#

| Function                     | Command                        |
|------------------------------|--------------------------------|
| [disable]enable bridge mode  | [no]bridgemode                 |
| [disable]enable DHCP service | [no]dhcp-server                |
| [disable]enable NAT          | [no]nat                        |
| Show current DHCP rules      | dhcpshow                       |
| Show LAN port IP address     | ipshow                         |
| Show NAT info                | natshow                        |
| Change LAN port IP address   | ip -addr x.x.x.x -mask x.x.x.x |

**Example:**

```
#config interfact fastethernet lan
<config-interface-fastethernet-lan>#ip -addr 192.168.1.10 -mask 255.255.255.0
```

### 7.4.2 WAN interface settings

**path:** <config-interface-fastethernet-wan>#

| Function                    | Command                        |
|-----------------------------|--------------------------------|
| [disable]enable dhcp client | [no]dhcp                       |
| [disable]enable pppoe       | [no]pppoe                      |
| [disable]enable QOS         | [no]qos                        |
| Set default gateway IP      | gateway x.x.x.x                |
| Clear default gateway IP    | no gateway                     |
| Set WAN port IP address     | ip -addr x.x.x.x -mask x.x.x.x |
| Show WAN port settings      | show                           |

**Example:**

```
# config interface fastethernet wan
<config-interface-fastethernet-wan>#ip -addr 202.112.241.100 -mask
255.255.255.0
```

You need to reconnect if the WAN port has been changed.

## 7.5 Netservice

**path:** <config-netservice>#

| Function                  | Command                          |
|---------------------------|----------------------------------|
| Set DNS address           | dns -ip x.x.x.x _domain xxx      |
| Set alternate DNS address | alterdns -ip x.x.x.x _domain xxx |
| Set hostname              | hostname xxx                     |
| Set http access port      | http-port xxx                    |
| Show http access setting  | http-port                        |
| Set telnet access port    | telnet-port xxx                  |
| Show telnet access port   | telnet-port                      |

|                                   |   |
|-----------------------------------|---|
| Set RTP initial port and quantity | media-port –startport xxx –number xxxx                |
| Add route rule                    | route –gateway x.x.x.x –addr x.x.x.x –mask x.x.x.x    |
| Delete route rule                 | no route –gateway x.x.x.x –addr x.x.x.x –mask x.x.x.x |
| Show route info                   | Route   |
| Show net service info             | show  |

**Example:**

```
#config net service
<config-net service>#dns –ip 202.112.10.36 _domain voip.com
<config-net service>#media-port –startport 10000 –number 200
<config-net service>#route –gateway 202.112.10.1 –addr 202.112.210.1 –mask
255.255.255.0
```

**7.6 Port settings****path: <config-port>#**

| Function                        | Command          |
|---------------------------------|------------------|
| set callerid mode               | callerid xxx     |
| disable callerid                | no callerid      |
| Disable call forward            | no callforward   |
| [disable]enable call transfer   | [no]calltransfer |
| [disable]enable call waiting    | [no]callwaiting  |
| Set DTMF gain                   | dtmfvolume xxx   |
| [disable]enable3-way conference | [no]threetalk    |
| Show port settings              | show             |

**7.7 SIP settings****path: <config-sip>#**

| Function                           | Command   |
|------------------------------------|---|
| [disable]enable registration       | [no] register   |
| [disable]enable auto detect server | [no] detect-server  |
| Set sip domain                     | default-domain xxx  |
| Set DTMF mode                      | dtmf-mode xxx   |
| Set auto detect interval time      | interval-time xxx   |
| [disable]enable auto swap server   | [no]swap-server   |
| Set local SIP signal port          | signalport xxx  |
| Set proxy server                   | server proxy -ip x.x.x.x _port xxx _user xxx _password xxx    |
| Set register server info           | server register -ip x.x.x.x _port xxx –user xxx _password xxx |

|                       |  |
|-----------------------|--|
| Set alter proxy info  | alter-server proxy -ip x.x.x.x _port xxx _user xxx<br>_password xxx    |
| Set alter server info | alter-server register -ip x.x.x.x _port xxx _user xxx<br>_password xxx |
| Show current sip info | show   |

**Example:**

#config sip server

**<config-sip-server>#** server proxy ip 210.25.23.22 \_port 5060 \_user aaa \_password 123456**7.8 User management****path: <config-user>#**

| Function              | Command                           |
|-----------------------|-----------------------------------|
| Change user right.    | access -user xxx -access xxx      |
| Change user password  | password -user xxx                |
| Add new user          | entry -user xxx -access 5 (or 12) |
| Delete user entry     | no entry -user xxx                |
| Show current sip info | show                              |

**Example:**

#config user

**<config-user>#**entry -user abc -access 7**Example:<config-user>#**access -user aaa -access 7**Note:**The command : **-user xxx -access digit**

Here if the digit is less 10 , then the user level is guest

If the digit is more that 10 ,then the user level is administrator

**7.9 Debug (Level 0~7)****path: <debug>#**

| Function                          | Command      |
|-----------------------------------|--------------|
| show debug setting                | show         |
| [disable]enable debug all modules | [no] all xxx |
| [disable]enable debug app module  | [no] app xxx |
| [disable]enable debug cdr module  | [no] cdr xxx |
| [disable]enable debug sip module  | [no] sip xxx |
| [disable]enable debug tel module  | [no] tel xxx |
| [disable]enable debug dsp module  | [no] dsp xxx |

**7.10 show system running info****path: <show>#**

| Function                             | Command    |
|--------------------------------------|------------|
| show: accesslist (firewall) settings | accesslist |

|                                      |                            |
|--------------------------------------|----------------------------|
| show network status                  | basic                      |

## 7.11 Logout

**Usage:** #telnet -target -port

Login:xxx

Password:xxx #

#logout

## 7.12 tracert trace network path info

usage: #tracert -host

Example:#tracert www.google.com

### 7.13 update

**usage:**

```
# update ftp -user xxx -password xxx -ip x.x.x.x -file xxx
```

```
# update tftp -ip x.x.x.x -file xxx
```

Example:

```
# update ftp -user abc -password 123 -ip 202.112.20.15 -file GW0220.z
```

### 7.14 upload configure file

**usage:**

```
# upload ftp -user xxx -password xxx -ip x.x.x.x -file xxx
```

```
# upload tftp -ip x.x.x.x -file xxx
```

### 7.15 download configure to flash

**usage: #download tftp -ip x.x.x.x -file xxx**

```
#download ftp -user xxx -password xxx -ip x.x.x.x -file xxx
```

Example:

```
#download ftp -user abc -password 123 -ip 202.112.20.15 -file GW0220.cfg
```

### 7.16 password

**usage:**

```
#password
```

```
Enter new password:xxx
```

```
Confirm new password:xxx
```

### 7.17 reload

usage: #reload

Reboot system

### 7.18 Network Diagnosis

There are some telnet commands for checking your network. Now Listing below for your information

| Command         | Function                               | Example   |
|-----------------|--|---|
| ping            | Check if the destination is accessible | #ping <a href="http://www.google.com">www.google.com</a>    |
| tracert         | Show network path info                 | #tracert <a href="http://www.google.com">www.google.com</a> |
| show basic      | Show network settings                  | #show basic   |
| show ip route   | Show route table                       | #show ip route  |
| show ip arp     | Show arp table                         | #show ip arp  |
| show ip netstat | Netstat programe                       | #show ip netstat  |

|        |                          |                     |
|--------|--------------------------|---------------------|
| telnet | Telnet to another device | #telnet 192.168.1.2 |
|--------|--------------------------|---------------------|

### 7.19 Restore to factory default

#setdefault (clear gateway settings expect network part)

#setdefault all (clear all settings.)

### 7.20 POST Mode(safe mode)

#### 7.20.1 Access Post mode process

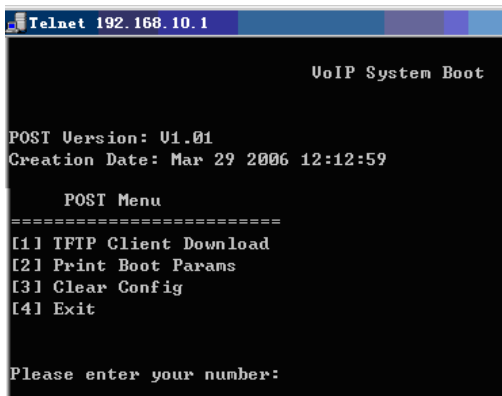

1 PC connect to GW0220 LAN port

2 Set your PC IP to be 192.168.10.205

3 Power off .

4 after power on ,within 4 seconds , telnet 192.168.10.1

5 config page is like below (if no page like the below .do step 4 again.)

```
Telnet 192.168.10.1
UoIP System Boot

POST Version: U1.01
Creation Date: Mar 29 2006 12:12:59

  POST Menu
  =====
[1] TFTP Client Download
[2] Print Boot Params
[3] Clear Config
[4] Exit

Please enter your number:
```

#### 7.20.2 Post mode clear

Input 3 and enter for clear configuration

```
Telnet 192.168.10.1

      POST Menu
=====
[1] TFTP Client Download
[2] Print Boot Params
[3] Clear Config
[4] Exit

Please enter your number: 3
set default config,please waiting...
clear config Finished!
clear sys config Finished!
set default config finished

=====
= Please Turn Off Power...
= After 3 seconds, please Turn On Power Again...
= System HALT Now
=====

      POST Menu
=====
[1] TFTP Client Download
[2] Print Boot Params
[3] Clear Config
[4] Exit

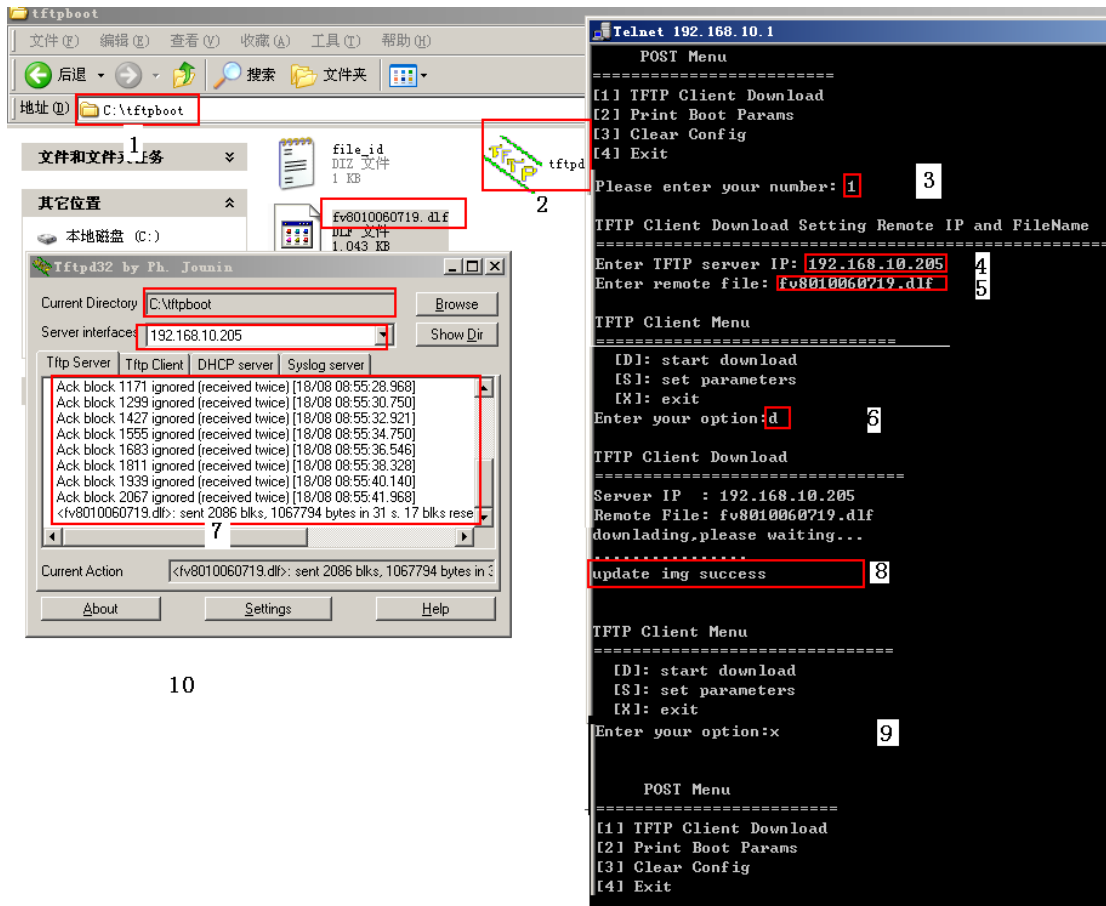

Please enter your number:
```

### 7.20.3 post mode TFTP update firmware

Input 1 for TFTP update firmware

Process:

- 1 Run TFTP server
- 2 Copy firmware into your TFTP server
- 3 After access post mode , input **1** for selecting TFTP updating.
- 4 Input TFTP server address
- 5 Input firmware name and then enter
- 6 Input **d** for starting download
- 7 If updating successfully ,It will display **update img success**
- 8 Input **x** for logout TFTP client
- 9 Input **4** for logout POST mode

GW0220 provide safe mode. When there is booting problem because of setting problem or firmware problem. User can restore the factory setting or upgrade to a new firmware to solve this problem.
