Safety Notices

Please read the following safety notices before installing or using this phone. They are crucial for the safe and reliable operation of the device.

- Please use the external power supply that is included in the package. Other power supplies may cause damage to the phone, affect the behavior or induce noise.
- Before using the external power supply in the package, please check with home power voltage. Inaccurate power voltage may cause fire and damage.
- Please do not damage the power cord. If power cord or plug is impaired, do not use it, it may cause fire or electric shock.
- The plug-socket combination must be accessible at all times because it serves as the main disconnecting device.
- Do not drop, knock or shake it. Rough handling can break internal circuit boards.
- Do not install the device in places where there is direct sunlight. Also do not put the device on carpets or cushions. It may cause fire or breakdown.
- Avoid exposure the phone to high temperature, below 0°C or high humidity. Avoid wetting the unit with any liquid.
- Do not attempt to open it. Non-expert handling of the device could damage it. Consult your authorized dealer for help, or else it may cause fire, electric shock and breakdown.
- Do not use harsh chemicals, cleaning solvents, or strong detergents to clean it. Wipe it with a soft cloth that has been slightly dampened in a mild soap and water solution.
- When lightning, do not touch power plug or phone line, it may cause an electric shock.
- Do not install this phone in an ill-ventilated place.
- You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.

mute
volume

Mute an active call to make the other side can not hear you.

Adjust headphones' volume when hookoff or during the talking or adjust ring volume when there is call coming; it can also be modified in the idle mode

Programmable
key

There are 4 kinds of functions configured through web:

Memory Key to store number for speed dial.

Line function, set dial-up mode(SIP1,SIP2,Dialpeer, IAX2)

3、 KeyEvent function, will expand the function key to special function key, for example, set to F_MWI, then this key will to be voicemail key, can check the voicemail information currently.

4、 DTMF function, press this key will send out the preconcert number by DTMF when talking

1.4. Port for connecting

Port name	attribute	description
LAN	Network interface	10/100M Connect it to PC
WAN	Network interface	10/100M Connect it to Network
DC 9V	Power port	5V/1A

FV6030 is provided with two Ethernet cables and a power adaptor. Phone has two interfaces: WAN and LAN. Please refer to safety notes of this manual carefully before power adaptor is connected.

2. Initial connecting and Setting

2.1. connect the phone

Step 1: Connect the IP Phone to the corporate IP telephony network. Before you connect the phone to the network, please check if your network can work normally.

You can do this in one of two ways, depending on how your workspace is set up.

Direct network connection—by this method, you need at least one available Ethernet port in your workspace. Use the Ethernet cable in the package to connect WAN port on the back of your phone to the Ethernet port in your workspace. Since this VoIP Phone has router functionality, whether you have a broadband router or not, you can make direct network connect. The following two figures are for your reference.

Shared network connection—Use this method if you have a single Ethernet port in your workspace with your desktop computer already connected to it. First, disconnect the Ethernet cable from the computer and attach it to the WAN port on the back of your phone. Next, use the Ethernet cable in the package to connect LAN port on the back of your phone to your desktop computer. Your IP Phone now shares a network connection with your computer. The following figure is for your reference.

Step 2: Connect the handset to the handset port by the handset cable in the package.

Step 3: connect the power supply plug to the DC adapter port on the back of the phone. Use the power cable to connect the power supply to a standard power outlet in your workspace.

Step 4: push the on/off switch on the back of the phone to the on side, then the phone's LCD screen displays "WAIT LOGON". Later, a ready screen typically displays the date, time.

If your LCD screen displays different information from the above, you need refer to the next

section “Initial setting” to set your network online mode.

If your VoIP phone registers into corporate IP telephony Server, your phone is ready to use.

2.2. Basic Initialization

FV6030 is provided with a plenty of functions and parameters for configuration. User needs some network and VoIP knowledge so that user could understand the meanings of parameters. In order to make user use the phone more easily and convenient, there are basic configurations introduced which is mandatory to ensure phone calls.

2.2.1. Network settings

Make sure that network is connected already before setting network of phone. FV6030 uses DHCP to get WAN IP configurations. So phone could access to network as long as there is DHCP server in it. If there is no DHCP server available, phone has to be changed WAN network setting to Static IP or PPPoE.

Setting PPPoE mode (for ADSL connection)

1. Get PPPoE account and password first.
2. Pressing  , and pressing  twice, screen shows “7 Advanced”. Now then pressing Soft2(Enter), LCD screen will display “Enter Password”.
3. Input password (default is 123) and pressing Soft2(Enter), then pressing  twice, now screen shows “3 Network”.
4. Pressing Soft2(Enter), and pressing  twice, there is “3 PPPoE Set” shown on the screen.
After pressing Soft2(Enter) again, screen displays “Account user123”; pressing Soft2(Edit), and then pressing Soft1(Del) to delete, you can input your PPPoE’s account and press Soft2 (Save). With “saved” displayed, screen will jump to show the account information currently.
5. Pressing  to show “2 Password”, and press Soft2 (Enter), press Soft2 (Edit) again, input your PPPoE’s password and then pressing Soft2(Save), With “Saved” displayed, screen will jump to show the password information currently.
6. Pressing Soft3 (Quit) to quit and pressing  to show “1 Net Mode”. Pressing Soft2(Enter), and pressing Soft2 (Edit) again, and pressing  also, screen jump to “<> PPPoE”. With Soft2(Save) pressed again, screen will show “Saved” and then jump to show the net mode currently.
7. pressing Soft3 (Quit) four times to quit to stand-by status and pressing  to shows “PPPoE”, phone tries to connect server to get IP. If there is shown “Negotiating...”, it shows that the phone is trying to access the PPPoE Server, else it shows that the phone has already get

IP with PPPoE.

Setting Static IP mode (static ADSL/Cable, or none PPPoE / DHCP network)

1. Prepare the network's parameters first. IP Address, Netmask, Default Gateway and DNS server IP address are needed. Please contact the service provider or technician of network.
2. Pressing , and  twice, screen shows "7 Advanced", then pressing Soft2(Enter), screen will show "Enter Password".
3. Input password (default is 123) and pressing Soft2(Enter), then pressing  twice, now screen shows "3 Network".
4. Pressing Soft2 (Enter), then pressing , screen shows "2 Static Set". Pressing Soft2(Enter) to make screen show "1 IP", press Soft2(Enter) and then press Soft2(Edit) again, and Soft1(Del) to delete old parameter. Input your IP address and press Soft2 (Save). After "Saved" shown, screen will jump to show the IP information currently.
5. Press  to show "2 Netmask". Press Soft2(Enter) and press Soft2(Edit) again, and then use Soft1(Del) to delete. Input your Netmask and press Soft2 (Save). After "Saved" shown, screen will jump to show the Netmask information currently.
6. Press  to show "3 Gateway". Press Soft2(Enter) and press Soft2(Edit) again, and then use Soft1(Del) to delete, Input your gateway and press Soft2(Save). After "Saved" shown, screen will jump to show the gateway information currently.
7. Press  to show "4 DNS". Press Soft2(Enter) and press Soft2(Edit) again, and use Soft1(Del) to delete. Input your DNS server address and press Soft2 (Save). After "Saved" shown, screen will jump to show DNS information.
8. Press twice Soft3 (Quit) quitting. With  pressed, screen shows "1 Net Mode". Press Soft2(Enter) and press Soft2(Edit) again, and , screen shows "<>Static"; with Soft2(Save) pressed, screen shows "Saved" and then shows the net mode currently.
9. Press Soft3 (Quit) four times to quit to stand-by status. Press  to show "Static". If screen shows the IP address and gateway which are set just now, it shows that Static IP mode is taken effect.

Setting DHCP mode

1. Press , and  twice, screen will show "7 Advanced". Then press Soft2(Enter), screen will show "Enter Password:".
2. Input password (default is 123) and press Soft2(Enter), and press  twice, then screen

displays "**3 Network**"

3. Press Soft2 (Enter) to show "**1 Net Mode**". After pressing Soft(Enter) and Soft2(Edit), using   to select until screen shows "<>DHCP". Press Soft2(Save), With "saved" displayed, screen will jump to show the net mode currently.
4. Press Soft3 (Quit) four times quitting to stand-by status. Press  to show "**DHCP**", if there is "**Negotiating...**" shown on screen, it shows that phone is keep trying to search DHCP server or get IP; If there is IP address displayed, it shows that DHCP mode has been taken effect.

3. FV6030's basic operation

3.1. Answer calls

FV6030 will ring to indicate you when there is call incoming, below is ways to answer call:

- Answer with hook off

Take handset, you can talk directly. You can just hang up to finish talk.

- Answer with handfree

Press  to begin talking. Press  again to finish talk.

- Answer with headset

Press  to begin talking with the other part using headset. Press  again to finish talk.

- Using handfree instead of handset during a talk

Press  and hook on the handset when you use handset to speak and want to change to use handfree to speak. Press  again to finish talk.

- Using handset instead of handfree during a talk

Hook off the handset when you want to use handfree to speak and want to change to use handset. Just hook on to finish talk.

3.2. Place calls

- Use handset

Hook off (screen will show the current using line, or you could use programmable key 1 to 5 to select), after getting dialing tone, you could begin to dial number. After finishing it, press # and FV6030 will send the number and call the number. When you hear a ringback tone and screen shows the callee's number, it shows that the person you called is ringing. If callee answers the call, you can begin to talk and your phone will keep showing callee's number and counting time. Just hang up to finish talk.

- Use handfree

Press  (screen will show the current using line, or you could use programmable key 1 to 5 to select), after getting dialing tone, you could begin to dial number. After finishing it, press # and FV6030 will send the number and call the number. When you hear a ringback tone and screen shows the callee's number, it shows that the person you called is ringing. If callee answers the call, you can begin to talk and your phone will keep showing callee's number and counting time. Press  again to finish talk.

- Use directory

press  in stand-by mode, and then press Soft2(Enter), you will access to phonebook.

If there are many persons records stored in the directory, you can use   to search the person which you want to contact. Press  to forward, and press  to backward. Press Soft2 (Dial) to dial the current number shown on the screen.

- **Direct dial**

Direct dial means user can make calls directly without hook off or using handfree. User can dial number in stand-by mode and then press Soft2 (Dial) to call. User also can press Soft3 (Save) to save the number to directory. In this way, user can not use #/time out or fix length to collect digits and dial.

- **Multi-line calls**

FV6030 supports 5 SIP lines max, that is user could use 5 SIP accounts to register and make calls. User could use programmable key as SIP line key. When a line key is pressed, phone will use the server to call. System will use SIP 1 as default line to call.

There are most two calls at the same time. Screen will display the incoming call number when user is keep talking. You can press the corresponding line key (the led flash to indicate) or Soft1 (Answer) to accept it, and hold the first one (if you want to use this function, you need enable Call Waiting of the phone first). Use Soft1 (Switch) to switch the two calls to talk. User can also use Soft1 (Conf) to make the second call when there is just an active call.

3.3. End calls

- **Hang up with handset hook on**

Hook on to finish talking.

- **Hang up with handfree**

Press  to finish talk when phone is in handfree status.

Note: user can not finish talk by pressing  if phone is used handset to talk.

- **Hang up with headset**

Press  to finish talk when the phone is using headset communication.

- **Hang up a active call with 2 calls**

When there are two calls, user might use Soft1(Switch)to switch to the call you want to hang up first. Then press # to finish talk, and phone will switch to the other call automatically.

Note: it is no use to press # to finish talk, if there is only one current call.

3.4. Call transfer

- **Blind Transfer**

During talk, press , and then dial the number that you want to transfer to, and press #.

Phone will transfer the current call to the third party. After finishing transfer, the call you talk to will be hanged up. User can not select SIP line when phone transfers call.

- **Attended Transfer**

During talk, press  and input the number that you want to transfer to and press Soft2 (Send). After that third party answers, then press  to complete the transfer. (You need enable call waiting and call transfer first). If there are two calls, you can just talk to one, and keep hold to the other one. The one who is keep hold can not speak to you or hear from you. In this status, user can press * or Soft2 (Conf) to make calls mode in conference mode. If user wants to stop conference, user can press Soft1 (Split). (User must enable call waiting and three way call first).

Note: the server that user uses must support RFC3515 or it might not be used

- **Alert Transfer**

During talk, press  firstly, then press Soft2(Send) after inputting the number that you want to transfer. You are waiting for connection, now, press Soft2(Transf) and the transfer will be done. (To use this feature, you need enable call waiting and call transfer first)

3.5. Call hold

During talking, user could press  to hold the current call. Press  again to unhold the call or switch the call active. This feature is also available in 3-way conference call.

3.6. 3-way conference call

User can press Soft1 (Conf) to dial the line2 (press Soft1(Answer) to answer the call directly if this call is from line2)during talking with line1. After line2 connect, user can press Soft2 (Conf) or * to enter into conference mode. To back to line1 from conference, please press Soft1 (Split); to

end the call, please press Soft3 (End) or press .

3.7. Switchboard Operator feature

User can press Soft1 (Conf) to dial the line2(press Soft1(Answer) to answer the call directly if this call is from line2) during talking with line1. After line2 connect, user can press Soft1 (Switch) to select which line you prefer to transfer, then press  to input the number you want to transfer and press  again to do the transfer.

3.8. Call records

FV6030 supports 100 items of missed call, 100 items of incoming call, and 100 items of dialed call. If the records are full, the newest will replace the oldest. If phone's power cut or reboot, call records will be discarded.

- **Missed call**

Press , and screen displays "Missed Call". Press Soft2 (Enter), phone will show the

number and time of missed call. User can also use  to browse the missed call records,

or press Soft2 (Detail) to check the details of this record, then press Soft2 (Dial) again to change the current number. Pressing Soft2(Dial) will call this number directly if user don't modify the number. If there is no missed call, screen will show "List Is Empty".

- Incoming call

Press  and switch the menu to "Incoming Call" by pressing . Press Soft2 (Enter), phone will show the number of incoming call. User can also use  to browse the incoming call records; or press Soft2 (Detail) to check the details of this record, then press Soft2 (Dial) again to change the current number. Pressing Soft2 (Dial) will call this number directly if user don't modify the number. If there is no incoming call, screen will show "List Is Empty".

- Dialed call

Press , and use  to select to "Outgoing Call". Press Soft2 (Enter), phone will show the number and time of dialed call. User can also use  to browse the dialed call records; or press Soft2 (Detail) to check the details of this record, then press Soft2 (Dial) again to change the current number. Pressing Soft2 (Dial) will call this number directly if user don't modify the number. If there is no dialed call, screen will show "List Is Empty". User can also press  to check "Outgoing Call".

3.9. Special function key

- Function key

If function key is set as SIP Line key, user can select which lines will be used to make call when dialing or make a 2nd dialing by this function key. Note that only the key which is registered is available to be select to call.

This function key can be configured as "Key Event", namely set as F_MWI. It can set relative keys as Voice mail key, can check new and old voice mail; also can be set as F_DND/F_FBOOK/F_CFWD/F_REDIAL/F_CALLERS, etc.

User can implement BLF/PRESENCE/MWI/SPEED DIAL features by Memory Key.

/b Busy Lamp Field: Based on Asterisk, it can be used to check the status (Idle,ring,busy) of the pointed phones. It is helpful to operator to know the status of the phone which he will switch to.

User can configure the BLF like: 300 is rogatory number, @1 means SIP1, of course, user can configure as @2(SIP2); if don't use this, simply says 300/b, it will use SIP1 as default. /b means

use BLF feature.

When this configuration enable, the phone will subscribe the status of pointed phone each 60s: LED off means Idled, LED flash means ring and LED on means busy.

/m MWI (Message waiting indication), means the number of this key is the number of voicemail

User can configure MWI function according to the above chart: 8000 is mailbox number, @1 is using SIP1, user also can configure @2(SIP2),the rest lines can be deduced by analogy, if no use, is 8000/m,it will pass the SIP1 line in default,/m means MIW function is using.

If there's new voicemail, LED will blink and shows new message, after receiving, server will send current mail info to phone, after receiving new MWI order, LED will respond, if LED light is off, it means no new voicemail.

/p Presence, means phone can check the status of other phone that has relevant numbers.

User can configures presence function according to the above chart: 500 is number that search caller, @1 is using SIP1, user also can configure @2(SIP2),the rest lines can be deduced by analogy, if no use, is 500/p, it will pass the SIP1 line in default, /p means presence function is using.

At this moment, press this button, it can show the corresponding phone's status (on, off, fail,) which LED don't remind

/f speed dial, user configure it as same time as above attribute, after configuring, phone will implement above function in priority, then considering to perform speed dial

/i PUSH TO TALK, user presses this button in standby, the phone can call other phone and the other phone will auto answer.

User can configure PUSH TO TALK according to the chart: 700 is number of callee.

After configuring, the phone can call 700 and make 700 auto answer by pressing this button.

● SMS function

Send message

- 1.Press soft1 (SMS) key in standby, then press Soft1(new) key. After inputting SMS content, press Soft2(send)key to input callee's number, next, press Soft2 again to send SMS.
2. Press soft1 (SMS) key in standby, then press soft1(new) key. After inputting SMS content, press soft2(send) key, then memory key to send SMS.
3. Press soft1 (SMS) key in standby, then press soft1(new) key. After inputting SMS content, press soft2(send) key, then pbook key to select your number to send SMS.
- 4.after inputting SMS content, user can press soft2(send) key, then input “ #” and “the callee's IP address”to send SMS.

Browse Message and reply message

when there's new message, phone will ring and remind by a small envelope on top of the screen, then press Soft1(SMS) key, and Soft2(Enter) key to browse current new message. when there are more new messages come in, user can choose by using up and down keys, then press Soft2(Enter)

key to check the sender's number and message content, next, press Soft2(Reply)key and input message content, finally, press Soft2(Send) again to reply this message.

Note: while user browses the message numbers, new messages will be marked by "new"; when user edits message, press # key that to switch input method,e.g. ABC (uppercase English input), abs (lowercase English input), 123(digit input), Korean (Korean input(if your phone's firmware version supports Korean). PY,(if your phone's firmware version supports Chinese)

Memo function

Press soft3 (Memo) key in standby, then Soft1(ADD) key, at this time, user can configure the future date time in terms of Time format, next, press down key to input the memo content, also can press # to switch input method, down key again to enter into reminder ring tone and down key at the third time to enter into ring mode. You can press right or left key to select your reminder ring tone after you enter into reminder ring tone, and select your ring mode by pressing right or left key after entering into ring mode. There are two ring modes, ring and text. Ring is reminder you by ring tone, text only show memo content without ring tone reminder. Finally, press soft2(save) key to save your memo.

Note: if there is memo notice when your phone is in call/off-hook/hands-free/earphone status, phone does not reminder by ring tone, only shows memo content in screen.

- **Realize Secondary Dial by Dialing for only one time.**

When you make secondary dial in off-hook/hands-free/earphone or standby pre-input mode, press

button to postpone input, and screen display will show ^. one stands for 2 seconds.

For example, you input 123^45, the phone will send DTMF(45) 2 seconds after the phone call 1123. 123^^45 will make phone send DTMF(45) at 6 seconds interval

- **Phonebook prefix function**

At standby mode, press phonebook button, user can not only select his needed number to call out but also he can add prefix to numbers, then call out. It is convenient for user add prefix numbers that PBX need.

3.10. call pickup

Call pickup is implemented by simulating pickup function of PBX. it's that, when A calls B, B rings but no answer, at this moment, C can hook off and input an appointed prefix plus B's number, pick up A's call and talk with A

The following chart shows how to configure an appointed prefix in dial peer to have call pick up function.

Number	Destination	Port	Mode	Alias	Suffix	Del Length
*1*T	0.0.0.0	5060	SIP	rep:pickup	no suffix	3

1 means appointed prefix code. After making the above configuration, C can dial *1* plus B's phone number to pick up A's call. User can set prefix in random, in the case of no affecting current dialing rules.

3.11. join call

When B is calling C, A can join in the existing call by inputting an appointed prefix numbers plus B or C number, if B or C also supports join call

The following chart shows how to configure an appointed prefix in dialpeer to have join call function.

Number	Destination	Port	Mode	Alias	Suffix	Del Length
*2*T	0.0.0.0	5060	SIP	rep:joincall	no suffix	3

2 means appointed prefix code. After making the above configuration, A can dial *2* plus B or C number to join B and C's call, . User can set prefix in random, in the case of no affecting current dialing rules.

3.12. redial/unredial

If B is in busy line when A calls B, A will get notice: busy, please hang up. If A want to connect B as soon as B is in idle, he can use redial function at the moment and he can dials an appointed prefix number plus B's number to realize redial function.

What is redial function? A can't not build a call with B when B is in busy ,then A will subscribe B's calling mode at 60 second intervals. once B is available, A will get reminder of rings to hook off, while A hooks off, A will call B automatically. If at this time A is occupied temporarily and unwilling to contact B, A also can cancel the redial function by dialing an appointed prefix plus B's number before making the redial function.

Number	Destination	Port	Mode	Alias	Suffix	Del Length
*3*T	0.0.0.0	5060	SIP	rep:redial	no suffix	3
*4*T	0.0.0.0	5060	SIP	rep:unredial	no suffix	3

3 is appointed prefix code. After making the above configuration, A can dial

3 plus B's phone number to make the redial function.

4 is appointed prefix code. After configuration, A can dial *4* to cancel redial function.

User can set prefix in random, in the case of no affecting current dialing rules.

3.13. click to dial

When user A browses in an appointed Web page, user A can click to call user B via a link (this link to user B), then user A's phone will ring, after A hooks off, the phone will dial to B.

4. Web configuration

4.1. Introduction of configuration

4.1.1. Ways to configure

FV6030 has three different ways to different users.

- Use phone keypad.
- Use web browser (recommendatory way) .
- Use telnet with CLI command.

4.1.2. Password Configuration

There are two levels to access to phone: root level and general level. User with root level can browse and set all configuration parameters, while user with general level can set all configuration parameters except SIP (1-5) or IAX2's that some parameters can not be changed, such as server address and port. User will has different access level with different username and password.

- Default user with general level:
 - ◆ username: guest
 - ◆ password: guest
- Default user with root level:
 - ◆ username: admin
 - ◆ password: admin

The default password of phone screen menu is 123.

4.2. Setting via web browser

When this phone and PC are connected to network, enter the IP address of the wan port in this phone as the URL (e.g. <http://xxx.xxx.xxx.xxx/> or <http://xxx.xxx.xxx.xxx:xxxx/>).

If you do not know the IP address, you can look it up on the phone's display by pressing

The login page is as below picture

Username:
Password:

※ : After you configure the ip phone, you need click save button in config under Maintenance in the left catalog to save your configuration. Otherwise the phone will lose your modification after power off and on.

4.3. Configuration via WEB

4.3.1. BASIC

4.3.1.1. Status

BASIC

Status	
Field name	Explanation
Network	Shows the configuration information on WAN and LAN port, including the connect mode of WAN port (Static, DHCP, PPPoE), MAC address, the IP address of WAN port and LAN port, ON or OFF of DHCP mode of LAN port.
Phone Number	Shows the phone numbers provided by the SIP LINE 1-5 servers. The last line shows the version number and issued date.

4.3.1.2. Wizard

BASIC							
STATUS		WIZARD		CALL LOG		MMI SET	
Network Mode Select							
Static IP MODE	<input checked="" type="radio"/>						
DHCP MODE	<input type="radio"/>						
PPPoE MODE	<input type="radio"/>						
<input type="button" value="BACK"/>				<input type="button" value="NEXT"/>			

Wizard	
Field Name	Explanation
Static IP MODE	<input checked="" type="radio"/>
DHCP MODE	<input type="radio"/>
PPPoE MODE	<input type="radio"/>

Please select the proper network mode according to the network condition. FV6030 provide three different network settings:

- Static: If your ISP server provides you the static IP address, please select this mode, then finish Static Mode setting. If you don't know about parameters of Static Mode setting, please ask your ISP for them.
- DHCP: In this mode, you will get the information from the DHCP server automatically; need not to input this information artificially.
- PPPoE: In this mode, your must input your ADSL account and password.

You can also refer to 3.2.1 Network setting to speed setting your network.

Choose Static IP MODE, click **【NEXT】** can config the network and SIP(default SIP1) simply, also can browse too. Click **【BACK】** can return to the last page.

Static IP Set	
Static IP Address	192.168.1.179
Netmask	255.255.255.0
Gateway	192.168.1.1
DNS Domain	
Primary DNS	202.96.134.133
Alter DNS	202.96.128.68

Static IP Address	Input the IP address distributed to you.
Netmask	Input the Netmask distributed to you.
Gateway	Input the Gateway address distributed to you.
DNS Domain	Set DNS domain postfix. When the domain which you input can not be parsed, phone will automatically add this domain to the end of the domain which you input before and parse it again.
Primary DNS	Input your primary DNS server address.
Alter DNS	Input your standby DNS server address.

SIMPLE SIP SET	
Display Name	
Server Address	192.168.1.2
Server Port	5060
User Name	2113
Password	••••
Phone Number	2113
Enable Register	<input checked="" type="checkbox"/>

Display Name	Set the display name.
Server Address	Input your SIP server address.
Server Port	Set your SIP server port.
User Name	Input your SIP register account name.
Password	Input your SIP register password.
Phone Number	Input the phone number assigned by your VOIP service provider.
Enable Register	Start to register or not by selecting it or not.

WAN	
Connect Mode	Static
Static IP Address	192.168.1.179
Gateway	192.168.1.1
SIP	
Register Server	192.168.1.2
Account/User Name	2113
PhoneNumber	2113
Register	ON
<input type="button" value="BACK"/> <input type="button" value="Finish"/>	

Display detailed information that you manual config.

Choose DHCP MODE, click【NEXT】can config SIP(default SIP1)simply, also can browse too.

Click 【BACK】 can return to the last page. Like Static IP MODE。

Choose PPPoE MODE, click【NEXT】can config the PPPoE account/password and SIP(default SIP1)simply, also can browse too. Click 【BACK】 can return to the last page. Like Static IP MODE。

PPPOE Set	
PPPOE Server	ANY
Username	user123
Password	*****
PPPoE Server	It will be provided by ISP.
Username	Input your ADSL account.
Password	Input your ADSL password.
Notice: Click 【Finish】 button after finished your setting, IP Phone will save the setting automatically and reboot, After reboot, you can dial by the SIP account.	

4.3.1.3. Call Log

You can query all the outgoing through this page.

BASIC		
STATUS	WIZARD	CALL LOG
MMI SET		
Call information		
Start Time	Last Time	Called Number

Call Log	
Field name	explanation
Start Time	Display the start time of the outgoing record.
Last Time	Display the conversation time of the outgoing record.
Called Number	Display the account/protocol/line of the outgoing record.
Notice: It will cover existing automatically if the call log table has the new record.	

4.3.1.4. MMI SET

MAC Address	00:09:45:a0:21:62
Get MAC Time	2008-05-16
Active IP	The current IP address of the phone.
Current Netmask	The current Netmask address.
MAC Address	The current MAC address of the phone.
Current Gateway	The current Gateway IP address.
Get MAC Time	Shows the time of getting MAC address
WAN Setting	
Static <input checked="" type="radio"/> DHCP <input type="radio"/> PPPoE <input type="radio"/>	
Please select the proper network mode according to the network condition. FV6030 provide three different network settings: <ul style="list-style-type: none"> ● Static: If your ISP server provides you the static IP address, please select this mode, then finish Static Mode setting. If you don't know about parameters of Static Mode setting, please ask your ISP for them. ● DHCP: In this mode, you will get the information from the DHCP server automatically; need not to input this information artificially. ● PPPoE: In this mode, your must input your ADSL account and password. You can also refer to 3.2.1 Network setting to speed setting your network. 	
Static IP Address	192.168.1.179
Netmask	255.255.255.0
Gateway	192.168.1.1
DNS Domain	
Primary DNS	202.96.134.133
Alter DNS	202.96.128.68
If you use static mode, you need set it.	
IP Address	Input the IP address distributed to you.
Netmask	Input the Netmask distributed to you.
Gateway	Input the Gateway address distributed to you.
DNS Domain	Set DNS domain postfix. When the domain which you input can not be parsed, phone will automatically add this domain to the end of the domain which you input before and parse it again.
Primary DNS	Input your primary DNS server address.
Alter DNS	Input your standby DNS server address.
PPPoE Server	ANY
Username	user123
Password	*****
If you uses PPPoE mode, you need to make the above setting.	
PPPoE Server	It will be provided by ISP.
Username	Input your ADSL account.
Password	Input your ADSL password.

Notice:

- 1) Click “Apply” button after finished your setting, IP Phone will save the setting automatically and new setting will take effect.
- 2) If you modify the IP address, the web will not response by the old IP address. Your need input new IP address in the address column to logon in the phone.
- 3) If networks ID which is DHCP server distributed is same as network ID which is used by LAN of system, system will use the DHCP IP to set WAN, and modify LAN’s networks ID(for example, system will change LAN IP from 192.168.10.1 to 192.168.11.1) when system uses DHCP client to get IP in startup; if system uses DHCP client to get IP in running status and network ID is also same as LAN’s, system will refuse to accept the IP to configure WAN. So WAN’s active IP will be 0.0.0.0

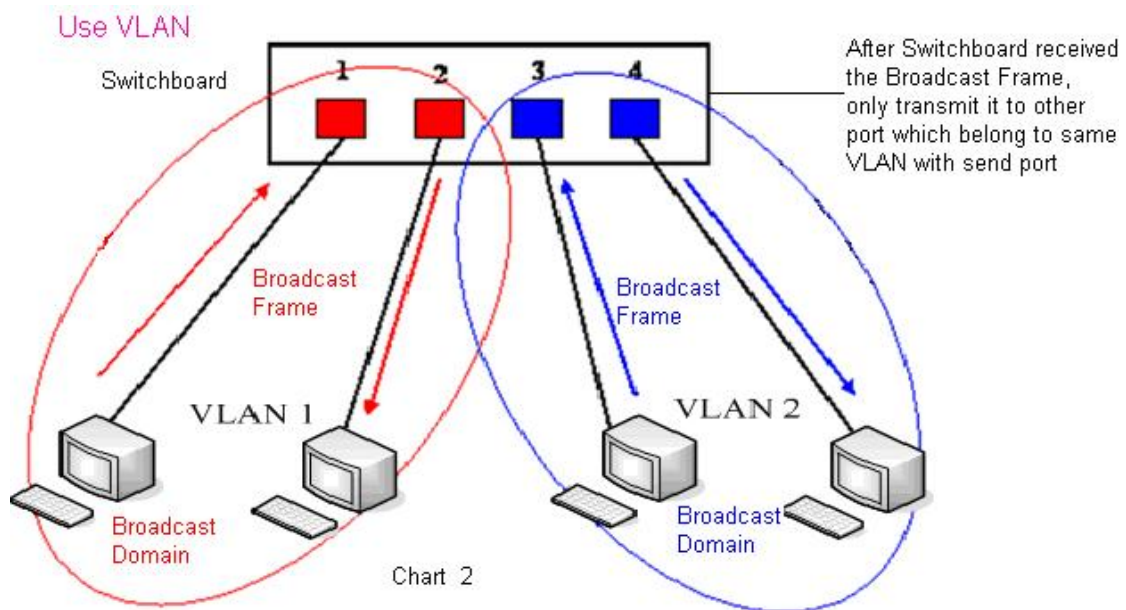

4.3.2.2. LAN Config

NETWORK	
WAN	LAN
QOS	SERIVCE PORT
DHCP SERVER	SNTP
LAN Setting	
LAN IP	<input type="text" value="192.168.10.1"/>
Netmask	<input type="text" value="255.255.255.0"/>
DHCP Service	<input checked="" type="checkbox"/>
NAT	<input checked="" type="checkbox"/>
Bridge Mode	<input type="checkbox"/>
<input type="button" value="APPLY"/>	

LAN Config	
Field name	explanation
LAN IP	Specify LAN static IP.
Netmask	Specify LAN Netmask.
DHCP Service	Select the DHCP server of LAN port or not. After you modify the LAN IP address, phone will amend and adjust the DHCP Lease Table and save the result amended automatically according to the IP address and Netmask. You need restart the phone and the DHCP server setting will take effect.
NAT	Select NAT or not.
Bridge Mode	Select Bridge Mode or not: If you select Bridge Mode, the phone will no longer set IP address for LAN physical port, LAN and WAN will join in the same network. Click “Apply”, the phone will reboot.
Notice: If you choose the bridge mode, the LAN configuration will be disabled.	

4.3.2.3. Qos Config

The VOIP phone support 802.1Q/P protocol and DiffServ configuration. VLAN functionality can use different VLAN IDs by setting signal/voice VLAN and data VLAN. The VLAN application of this phone is very flexible.

In chart 1, there is a layer 2 switch without setting VLAN. Any broadcast frame will be transmitted to the other ports except the send port. For example, a broadcast information is sent out from port 1 then transmitted to port 2,3and 4.

In chart 2, red and blue indicate two different VLANs in the switch, and port 1 and port 2 belong to red VLAN, port 3 and port 4 belong to blue VLAN. If a broadcast frame is sent out from port 1, switch will transmit it to port 2, the other port in the red VLAN and not transmit it to port3 and port 4 in blue VLAN. By this means, VLAN divide the broadcast domain via restricting the range of broadcast frame transmission.

Note: chart 2 use red and blue to identify the different VLAN, but in practice, VLAN uses different VLAN IDs to identify.

NETWORK

WAN	LAN	QOS	SERVICE PORT	DHCP SERVER	SNTP
QoS Set					
<input type="checkbox"/> VLAN Enable					
<input checked="" type="checkbox"/> VLAN ID Check Enable		Voice/Data VLAN differentiated		Undifferentiated ▼	
<input type="checkbox"/> DiffServ Enable		DiffServ Value		0x b8	
Voice 802.1P Priority	0 (0 - 7)	Data 802.1P Priority	0 (0 - 7)		
Voice VLAN ID	256 (0 - 4095)	Data VLAN ID	254 (0 - 4095)		
<input type="button" value="APPLY"/>					

QoS Configuration	
Field name	explanation
VLAN Enable	Before select it to enable VLAN, you need enable Bridge mode in LAN config.
VLAN ID Check Enable	Enable VLAN ID check by selecting it. After enable VLAN ID check, if VLAN ID of a data package is not the same with the phone's or a data package do not have VLAN ID, the data package will be discarded.
Voice/Data VLAN differentiated	After enable VLAN, system will set packets with different type of VLAN ID. Undifferentiated means after using VLAN, both voip packets and other data packets will use the voice VLAN ID; tag differentiated means after using VLAN, voip(signal and voice) packets will add voice VLAN ID, and other data packets will add data VLAN ID; data untagged means after using VLAN, only voip packets will add voice VLAN ID. Other data packets will not use VLAN.
DiffServ Enable	Select it or not to Enable or disable DiffServ.
DiffServ Value	Set DiffServ value, the common value is 0x00.
Voice 802.1P Priority	Specify 802.1P Priority of voice/signal data package.
Data 802.1P Priority	Set 802.1p of data VLAN. Non-voip data (such as http, telnet, ping etc) will use this value to set VLAN package.
Voice VLAN ID	Set VLAN ID of voice/signal data package.
Data VLAN ID	Set 802.1q of data VLAN ID. Non-voip data (such as http, telnet, ping etc) will use this value to set VLAN package.
<p>NOTICE:</p> <ol style="list-style-type: none"> 1) Startup VLAN, if set Voice/Data VLAN differentiated as Undifferentiated, all packets will use the Voice VLAN ID as the tag. 2) Startup VLAN, if set Voice/Data VLAN differentiated as tag differentiated and disable the DiffServ, then system will not distinguish the voice and data, all packets will use the Voice VLAN ID as the tag. 3) Startup VLAN, if set Voice/Data VLAN differentiated as tag differentiated and enable the DiffServ, then system will distinguish the voice and data and add the VLAN ID each other. 	

- 4) Startup VLAN, if set Voice/Data VLAN differentiated as data untagged, then the packet of the signal/voice will use the Voice VLAN ID as the tag, but the data packets will not take the VLAN tag.
- 5) If Disable the VLAN, regardless to set the Voice/Data VLAN differentiated or not, all packets will not take the VLAN tag; If enable the DiffServ, all packets will only take the DiffServ value.
- 6) One must to notice, enable the VLAN ID Check Enable that is default, If enable it, the phone will match the VLAN ID strictly. When others' VLAN ID mismatch with us, the packets will discard. Contrarily, the phone will accept the packets with the distinct VLAN ID.
- 7) You must gain the IP with the Static mode when you set VLAN, otherwise can't gain the IP in the VLAN and also can not dial with point to point.

4.3.2.4. Service Port

You can set the port of telnet/HTTP/RTP by this page.

NETWORK	
WAN LAN QOS SERVICE PORT DHCP SERVER SNTP	
Service Port	
HTTP Port	<input type="text" value="80"/>
Telnet Port	<input type="text" value="23"/>
RTP Initial Port	<input type="text" value="10000"/>
RTP Port Quantity	<input type="text" value="200"/>
<input type="button" value="APPLY"/>	

SERVICE PORT	
Field name	explanation
HTTP Port	set web browse port, the default is 80 port, if you want to enhance system safety, you'd better change it into non-80 standard port; Example: The IP address is 192.168.1.70. and the port value is 8090, the accessing address is http://192.168.1.70:8090
Telnet Port	Set Telnet Port, the default is 23. You can change the value into others. Example: The IP address is 192.168.1.70. the telnet port value is 8023, the accessing address is telnet 192.168.1.70 8023
RTP Initial Port	Set the RTP Initial Port. It is dynamic allocation.
RTP Port Quantity	Set the maximum quantity of RTP Port, the default is 200.
Notice:	
1) You need save the configuration and reboot the phone after set this page.	
2) If you modify the port of Telnet and HTTP, you would better set the value more than 1024 because the port value less than 1024 is system port reserved.	
3) if you set 0 for the HTTP port, it will disable HTTP service.	

4.3.2.5. DHCP SERVER

NETWORK						
WAN	LAN	QOS	SERVICE PORT	DHCP SERVER	SNTIP	
DHCP Leased Table						
Leased IP Address				Client Hardware Address		
DHCP Lease Table						
Name	Start IP	End IP	Lease Time	Netmask	Gateway	DNS
lan	192.168.10.1	192.168.10.30	1440	255.255.255.0	192.168.10.1	192.168.10.1
DHCP Lease Table Setting						
Lease Table Name	<input type="text"/>					
Start IP	<input type="text"/>					
End IP	<input type="text"/>					
Lease Time	<input type="text"/> (minute)					
Netmask	<input type="text"/>					
Gateway	<input type="text"/>					
DNS	<input type="text"/>					
<input type="button" value="Add"/>						
DHCP Lease Table Delete						
Lease Table Name	<input type="text" value="lan"/>				<input type="button" value="Delete"/>	
DNS relay Setting						
DNS Relay <input checked="" type="checkbox"/>				<input type="button" value="APPLY"/>		

DHCP SERVER						
Field name	explanation					
DHCP Leased Table	IP-MAC mapping table. If the LAN port of the phone connects to a device, this table will show the IP and MAC address of this device.					
DHCP Lease Table						
Name	Start IP	End IP	Lease Time	Netmask	Gateway	DNS
lan	192.168.10.1	192.168.10.30	1440	255.255.255.0	192.168.10.1	192.168.10.1
Shows the DHCP Lease Table, the unit of Lease time is Minute.						
Lease Table Name	Specify the name of the lease table					
Start IP	Set the start IP address of the lease table					
End IP	Set the end IP address of the lease table, the network device connected to LAN port will get IP address between Start IP and End IP by DHCP.					
Netmask	Set the Netmask of the lease table					
Gateway	Set the Gateway of the lease table					
Lease Time	Set the Lease Time of the lease table					
DNS	Set the default DNS server IP of the lease table; Click the Add button to submit and add this lease table					

DHCP Lease Table Delete	
Lease Table Name	lan <input type="button" value="Delete"/>
Select name of lease table, click the Delete button will delete the selected lease table from DHCP lease table.	
DNS Relay	Select DNS Relay, the default is enable. Click the Apply button to become effective.
Notice: 1) The size of lease table can not be larger than the quantity of C network IP address. We recommend you to use the default lease table and not modify it. 2) If you modifies the DHCP lease table, you need save the configuration and reboot.	

4.3.2.6. SNTP

Setting time zone and SNTP (Simple Network Time Protocol) server according to your location, you can also manually adjust date and time in this web page.

SIP Config	
Field name	explanation
<div style="background-color: #0056b3; color: white; padding: 2px;">SIP Line Select</div> <div style="border: 1px solid black; padding: 2px; display: flex; justify-content: space-between;"> SIP 1 <input type="button" value="Load"/> </div>	
Choose line to set info about SIP, there are 5 lines to choose. You can switch by 【Load】 button.	
Register Status	Shows if the phone has been registered the SIP server or not; or so, show Unapplied;
Server Name	Set the server name.

Server Address	Input your SIP server address.
Server Port	Set your SIP server port.
Account Name	Input your SIP register account name.
Password	Input your SIP register password.
Phone Number	Input the phone number assigned by your VoIP service provider. Phone will not register if there is no phone number configured.
Display Name	Set the display name.
Proxy Server Address	Set proxy server IP address (Usually, Register SIP Server configuration is the same as Proxy SIP Server. But if your VoIP service provider give different configurations between Register SIP Server and Proxy SIP Server, you need make different settings.)
Proxy Server Port	Set your Proxy SIP server port.
Proxy Username	Input your Proxy SIP server account.
Proxy Password	Input your Proxy SIP server password.
Domain Realm	Set the sip domain if needed, otherwise this VoIP phone will use the Register server address as sip domain automatically. (Usually it is same with registered server and proxy server IP address).
Enable Register	Start to register or not by selecting it or not.
Register Expire Time	Set expire time of SIP server register, default is 60 seconds. If the register time of the server requested is longer or shorter than the expire time set, the phone will change automatically the time into the time recommended by the server, and register again.
NAT Keep Alive Interval	Set examining interval of the server, default is 60 seconds
User Agent	Set the user agent if have, the default is VoIP Phone 1.0
Signal Key	Set the key for signal encryption
Media Key	Set the key for RTP encryption
Local port	Set sip port of each line
Ring type	Set ring type of each line
Subscribe Expire Time	Overtime of resending subscribe packet. Suggest to use the default config.
Hot line Number	Set hot line number of each line
Enable Keep Authentication	Enable/Disable Keep Authentication System will take the last authentication field which is passed the authentication by server to the request packet. It will decrease the server's repeat authorization work, if it is enable.
NAT Keep Alive	Enable/Disable keeps NAT of SIP alive. If some server refuse to register with too short interval time, and has no packets sending to device in private network to keep NAT alive, user could set this function ON. It need set the keep alive interval time less than the NAT server's.
Enable Via rport	Enable/Disable system to support RFC3581. Via rport is special way to realize SIP NAT.

Enable PRACK	Enable or disable SIP PRACK function, suggest use the default config.
Long Contact	Set more parameters in contact field; connection with SEM server
Enable URI Convert	Convert # to %23 when send the URI.
Dial Without Register	Set call out by proxy without registration;
Ban Anonymous Call	Set to ban Anonymous Call;
Enable DNS SRV	Support DNS looking up with _sip.udp mode
Forward Type	<p>Select call forward mode, the default is Off</p> <ul style="list-style-type: none"> ● Off: Close down calling forward ● Busy: If the phone is busy, incoming calls will be forwarded to the appointed phone. ● No answer: If there is no answer, incoming calls will be forwarded to the appointed phone. ● Always: Incoming calls will be forwarded to the appoint phone directly. <p>The phone will Prompt the incoming while doing forward.</p>
Forward Phone Number	Appoint your forward phone number.
Server Type	Select the special type of server which is encrypted, or has some unique requirements or call flows.
DTMF Mode	<p>Select DTMF sending mode, there are three modes:</p> <ul style="list-style-type: none"> ● DTMF_RELAY ● DTMF_RFC2833 ● DTMF_SIP_INFO <p>Different VoIP Service providers may provide different modes.</p>
RFC Protocol Edition	Select SIP protocol version to adapt for the SIP server which uses the same version as you select. For example, if the server is CISCO5300, you need to change to RFC2543, else phone may not cancel call normally. System uses RFC3261 as default.
Transport Protocol	Set transport protocols, TCP or UDP;
RFC Privacy Edition	Set Anonymous call out safely; Support RFC3323and RFC3325;
Transfer Expire Time	For the phone supports the transfer of certain special features server, set interval time between sending “bye” and hanging up after the phone transfers a call.
Click to Talk	Set click to Talk (need practical software support).
Signal Encode	Enable/Disable Signal Encrypt.
RTP Encode	Enable/Disable RTP Encrypt.
Enable Session Timer	Set Enable/Disable Session Timer, whether support RFC4028.It will refresh the SIP sessions.
Answer With Single Codec	Enable/Disable the function when call is incoming, phone replies SIP message with just one codec which phone supports.
Auto TCP	Set to use automatically TCP protocol to guarantee usability of transport as message is above 1300 byte
Enable Strict Proxy	Support the special SIP server-when phone recieves the

	packets sent from server, phone will use the source IP address, not the address in via field.
Enable GRUU	Set to support GRUU
Enable Displayname Quote	Set to make quotation mark to displayname as the phone sends out signal, in order to be compatible with server.

4.3.3.2. IAX2 Config

VOIP

SIP	IAX2	STUN	DIAL PEER
IAX2			
Register Status	Unregistered		
IAX2 Server Addr	<input type="text"/>		
IAX2 Server Port	<input type="text" value="4569"/>		
Account Name	<input type="text"/>		
Account Password	<input type="text"/>		
Phone Number	<input type="text"/>		
Local Port	<input type="text" value="4569"/>		
Voice Mail Number	<input type="text" value="0"/>		
Voice Mail Text	<input type="text" value="mail"/>		
Echo Test Number	<input type="text" value="1"/>		
Echo Test Text	<input type="text" value="echo"/>		
Refresh Time	<input type="text" value="60"/>	Seconds	
Enable Register	<input type="checkbox"/>		
Enable G.729	<input type="checkbox"/>		
<input type="button" value="APPLY"/>			

IAX2 Config	
Field name	explanation
Register Status	Shows if the phone has been registered the IAX2 server or not.
IAX2 Server Addr	Input your IAX2 server address.
IAX2 Server Port	Set your IAX2 server port, the default is 4569.
Account Name	Input your IAX2 register account name.
Account Password	Input your IAX2 register password.
Phone Number	Input your assigned phone number (usually it is same you're your IAX2 account name).
Local Port	Set your local sport, the default is 4569.
Voice Mail Number	Specify the voice mail's number.
Voice Mail Text	Specify the voice mail's name.
Echo Test Number	Set echo test number. If IAX2 server supports echo test, and echo test number is non- numeric, system could set an echo test number to replace the echo test text. So user can dial the numeric number to test echo voice test. This function is provided with server to make endpoint to test whether endpoint could talk through server normally.
Echo Test Text	Specify echo test text's name.

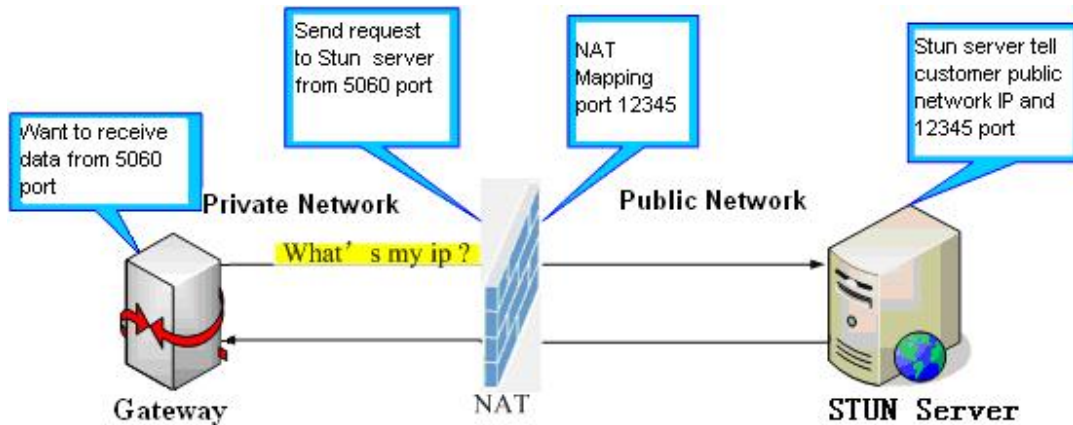

Refresh Time	Set expire time of IAX2 server register, you can set it between 60 and 3600 seconds.
Enable Register	Start to register the IAX2 server or not by selecting it or not.
Enable G.729	Enable or disable code G.729 by selecting it or not

4.3.3.3. Stun Config

In this web page, you can config SIP STUN.

STUN:

By STUN server, the phone in private network could know the type of NAT and the NAT mapping IP and port of SIP. The phone might register itself to SIP server with global IP and port to realize the device both calling and being called in private network.

VOIP

SIP	IAX2	STUN	DIAL PEER
STUN Set			
STUN NAT Transverse	FALSE		
STUN Server Addr	<input type="text"/>		
STUN Server Port	3478		
STUN Effect Time	50	Seconds	
Local SIP Port	5060		
<input type="button" value="APPLY"/>			
Set Sip Line Enable Stun			
SIP 1	<input type="button" value="Load"/>		
Use Stun	<input type="checkbox"/>		
<input type="button" value="APPLY"/>			

STUN	
Field name	explanation
STUN NAT Transverse	Shows STUN NAT Transverse estimation, true means STUN can penetrate NAT, while False means not.
STUN Server Addr	Set your SIP STUN Server IP address

STUN Server Port	Set your SIP STUN Server Port
STUN Effect Time	Set STUN Effective Time. If NAT server finds that a NAT mapping is idle after time out, it will release the mapping and the system need send a STUN packet to keep the mapping effective and alive.
Local SIP Port	Set the SIP port.
<div style="background-color: #4F81BD; color: white; padding: 2px;">Set Sip Line Enable Stun</div> <div style="border: 1px solid #ccc; padding: 2px; margin-top: 2px;"> SIP 1 ▾ Load </div>	
Choose line to set info about SIP, There are 5 lines to choose. You can switch by 【Load】 button.	
Use Stun	Enable/Disable SIP STUN.
Notice: SIP STUN is used to realize SIP penetration to NAT. If your phone configures STUN Server IP and Port (default is 3478), and enable SIP Stun, you can use the ordinary SIP Server to realize penetration to NAT.	

4.3.3.4. DIAL PEER setting

This functionality offers you more flexible dial rule, you can refer to the following content to know how to use this dial rule. When you want to dial an IP address, the entry of IP addresses is very cumbersome, but by this functionality, you can set number 156 to replace 192.168.1.119 here.

Number	Destination	Port	Mode	Alias	Suffix	Del Length
156	192.168.1.119	5060	SIP	no alias	no suffix	0

When you want to dial a long distance call to Beijing, you need dial an area code 010 before local phone number, but you can also dial number 1 instead of 010 after we make a setting according to this dial rule. For example, you want to dial 01062213123, but you need dial only 162213123 to realize your long distance call after you make this setting.

Number	Destination	Port	Mode	Alias	Suffix	Del Length
1T	0.0.0.0	5060	SIP	rep:010	no suffix	1

To save the memory and avoid abundant input of user,add the follow fuctions:

Number	Destination	Port	Mode	Alias	Suffix	Del Length
13xxxxxxxx	0.0.0.0	5060	SIP	add:0	no suffix	0
13[5-9]xxxxxxxx	0.0.0.0	5060	SIP	add:0	no suffix	0

1、 x Match any single digit that is dialed.

If user makes the above configuration, after user dials 11 digit numbers started with 13, the phone will send out 0 plus the dialed numbers automatically.

2、 [] Specifies a range that will match digit. It may be a range, a list of ranges separated by commas, or a list of digits.

If user makes the above configuration, after user dials 11 digit numbers started with from 135 to 139, the phone will send out 0 plus the dialed numbers automatically.

Use this phone you can realize dialing out via different lines without switch in web interface.

VOIP

SIP	IAX2	STUN	DIAL PEER
-----	------	------	-----------

Dial Peer Table						
Number	Destination	Port	Mode	Alias	Suffix	Del Length
156	192.168.1.119	5060	SIP	no alias	no suffix	0
1T	0.0.0.0	5060	SIP	rep:010	no suffix	1
13xxxxxxxx	0.0.0.0	5060	SIP	add:0	no suffix	0
13[5-9]xxxxxxx	0.0.0.0	5060	SIP	add:0	no suffix	0

Add Dial Peer	
Phone Number	<input type="text"/>
Destination (optional)	<input type="text"/>
Port(optional)	<input type="text"/>
Alias(optional)	<input type="text"/>
Call Mode	SIP <input type="button" value="v"/>
Suffix(optional)	<input type="text"/>
Delete Length (optional)	<input type="text"/>
<input type="button" value="Submit"/>	

Dial Peer Option	
156 <input type="button" value="v"/>	<input type="button" value="Delete"/> <input type="button" value="Modify"/>

DIAL PEER

Field name	explanation
Phone number	There are two types of matching conditions: one is full matching, the other is prefix matching. In the Full matching, you need input your desired phone number in this blank, and then you need dial the phone number to realize calling to what the phone number is mapped. In the prefix matching, you need input your desired prefix number and T; then dial the prefix and a phone number to realize calling to what your prefix number is mapped. The prefix number supports at most 30 digits
Destination	Set Destination address. This is optional config item. If you want to set peer to peer call, please input destination IP address or domain name. If you want to use this dial rule in SIP2 line, you need input 255.255.255.255 or 0.0.0.2 in it.
Port	Set the Signal port, the default is 5060 for SIP.
Alias	Set alias. This is optional config item. If you don't set Alias, it will show no alias.

Note: There are four types of aliases.

- 1) add: xxx, it means that you need dial xxx in front of phone number, which will reduce dialing number length.
- 2) all: xxx, it means that xxx will replace some phone number.
- 3) del: It means that phone will delete the number with length appointed.

4) Rep: It means that phone will replace the number with length and number appointed. You can refer to the following examples of different alias application to know more how to use different aliases and this dial rule.

Call Mode	Select different signal protocol, SIP or IAX2
Suffix	Set suffix, this is optional config item. It will show no suffix if you don't set it.
Delete Length	Set delete length. This is optional config item. For example: if the delete length is 3, the phone will delete the first 3 digits then send out the rest digits. You can refer to examples of different alias application to know how to set delete length.

Introduction of how to set up dial-peer to implement switch between multi- SIP lines

Number	Destination	Port	Mode	Alias	Suffix	Del Length
9T	0.0.0.1	5060	SIP	no alias	no suffix	0
8T	0.0.0.2	5060	SIP	no alias	no suffix	0

9T mapping: If you have registered a SIP1 server and set dial-peer according to the above table, all calls will be sent via SIP1 server when you press the numeric key "9" in front of dialing destination phone numbers.

8T mapping: If you have registered a Private SIP2 server and set dial-peer according to the above table, all calls will be sent via SIP2 server when you press the numeric key "8" in front of dialing destination phone numbers.

Corresponding other lines, like SIP3/SIP4/SIP5, can set Destination as 0.0.0.3/0.0.0.4/0.0.0.5

Number	Destination	Port	Mode	Alias	Suffix	Del length
2T	0.0.0.0	4569	IAX2	del	no suffix	1

the rule of 2T means user need to dial the number with prefix 2 if he want to dial via IAX2 server

Enable Call Transfer	<input checked="" type="checkbox"/>	Enable Call Waiting	<input checked="" type="checkbox"/>
Enable Three Way Call	<input checked="" type="checkbox"/>	Accept Any Call	<input checked="" type="checkbox"/>
Auto Answer	<input type="checkbox"/>	Enable Voice Record	<input type="checkbox"/>
Use Record Server	<input type="checkbox"/>	Incoming Record Playing	<input checked="" type="checkbox"/>

Black List

Black List

Limit List

Limit List

Call Service	
Field name	explanation
Hotline	Specify Hotline number. If you set the number, you can not dial any other numbers.
No Answer Time	Specify No Answer Time
P2P IP Prefix	Set Prefix in peer to peer IP call. For example: what you want to dial is 192.168.1.119, If you define P2P IP Prefix as 192.168.1., you dial only #119 to reach 192.168.1.119. Default is “.”. If there is no “.” Set, it means to disable dialing IP.
Remote Record No	Set Remote Record number. Via dialing this number, you can hear all voice records in your VoIP server.
Do Not Disturb	Select NO Disturb, the phone will reject any incoming call, the callers will be reminded by busy, but any outgoing call from the phone will work well.
Ban Outgoing	If you select Ban Outgoing to enable it, and you can not dial out any number.
Enable Call Transfer	Enable Call Transfer by selecting it.
Enable Call Waiting	Enable Call Waiting by selecting it.
Enable Three Way Call	Enable Three Way Call
Accept Any Call	If select it, the phone will accept the call even if the called number is not belong to the phone.
Auto Answer	If select it, the phone will auto answer when there is an incoming call.
Enable Voice	If select Enable Voice Record, when no answer time of an incoming call is

Record	beyond its set value, the phone will remind the caller to record.			
Incoming Record Playing	Select it or not to Enable or disable Incoming Record Playing			
Use Record Server	Select it or not to Enable or disable Use Record Server.			
Black List	<p>Set Add/Delete Black list. If user does not want to answer some phone calls, add these phone numbers to the Black List, and these calls will be rejected.</p> <p>x and . are wildcard. x means matching any single digit. for example, 4xxx expresses any number with prefix 4 which length is 4 will be forbidden to dialed out</p> <p>DOT (.) means matching any arbitrary number digit. for example, 6. expresses any number with prefix 6 will be forbidden to dialed out. if user wants to allow a number or a series of number incoming, he may add the number(s) to the list as the white list rule. the configuration rule is -number, for example, -123456, or -1234xx</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td style="text-align: center;">Black List</td> </tr> <tr> <td style="text-align: center;">-4119</td> </tr> <tr> <td style="text-align: center;">.</td> </tr> </table> <p>Means any incoming number is forbidden except for 4119 Note: End with DOT (.) when set up the white list</p>	Black List	-4119	.
Black List				
-4119				
.				
Limit List	<p>Set Add/Delete Limit List. Please input the prefix of those phone numbers which you forbid the phone to dial out. For example, if you want to forbid those phones of 001 as prefix to be dialed out, you need input 001 in the blank of limit list, and then you can not dial out any phone number whose prefix is 001.</p> <p>x and . are wildcard. x means matching any single digit. for example, 4xxx expresses any number with prefix 4 which length is 4 will be forbidden to dialed out</p> <p>. means matching any arbitrary number digit. for example, 6. expresses any number with prefix 6 will be forbidden to dialed out.</p>			
Notice: Black List and Limit List can record at most 10 items respectively.				

4.3.4.3. Digital Map Configuration

This system supports 4 dial modes:

- 1). End with “#”: dial your desired number, and then press #.
- 2). Fixed Length: the phone will intersect the number according to your specified length.
- 3). Time Out: After you stop dialing and waiting time out, system will send the number collected.
- 4). User defined: you can customize digital map rules to make dialing more flexible. It is realized by defining the prefix of phone number and number length of dialing.

In order to keep some users' secondary dialing manner when dialing the external line with pbx, phone can be added a special rule to realize it. so user can dial a number as external line prefix and get the secondary dial tone to keep dial the external number. after finishing dialing, phone will

send the prefix and external number totally to their server.

for example, there is a rule 9,xxxxxxx in the digital map table. after dialing 9, phone will send the secondary dial tone, user may keep going dialing. after finished, phone will call the number which starts with 9, actually the number sent out is 9-digit with 9.

The screenshot shows a web interface titled "PHONE" with several tabs: DSP, CALL SERVICE, DIGITAL MAP (selected), PHONE BOOK, and FUNCTION KEY. The "Digital Map Set" section contains three rows: "End With '#' " with a checked checkbox, "Fixed Length" with an unchecked checkbox and a value of "11", and "Time Out" with a checked checkbox and a value of "5" (with a range "(3--30)" to its right). An "APPLY" button is located below these settings. The "Digital Rule table" section has a "Rules:" label and a table with an empty row, an "Add" button, a dropdown arrow, and a "Del" button.

Digital Map Configuration	
Field name	explanation
End with "#"	Set Enable/Disable the phone ended with “#” dial.
Fixed Length	Specify the Fixed Length of phone ending with.
Time out	Set the timeout of the last dial digit. The call will be sent after timeout.

The screenshot shows a "Digital Rule table" section with a "Rules:" label and a table with an empty row, an "Add" button, a dropdown arrow, and a "Del" button.

Below is user-defined digital map rule:

[] Specifies a range that will match digit. May be a range, a list of ranges separated by commas, or a list of digits.

x Match any single digit that is dialed.

. Match any arbitrary number of digits including none.

Tn Indicates an additional time out period before digits are sent of n seconds in length. n is mandatory and can have a value of 0 to 9 seconds. Tn must be the last 2 characters of a dial plan. If Tn is not specified it is assumed to be T0 by default on all dial plans.

RULE
"[1-8]xxx"
"9xxxxxxx"
"911"
"99T4"
"9911x.T4"

Cause extensions 1000-8999 to be dialed immediately

Cause 8 digit numbers started with 9 to be dialed immediately

Cause 911 to be dialed immediately after it is entered.

Cause 99 to be dialed after 4 seconds.

Cause any number started with 9911 to be dialed 4 seconds after dialing ceases.

Notice: End with “#”, Fixed Length, Time out and Digital Map Table can be used simultaneously, System will stop dialing and send number according to your set rules.

4.3.4.4. Phone Book

You can input the name, phone number and select ring type for each name here.

F 5	Line	SIP5:Name5														
<p>Memory Key: you can set a number for each memory key. After set it, you can dial the number you set by pressing this memory key.</p> <p>Line: select SIP1, SIP2, SIP3, SIP 4, SIP5, Dialpeer, or IAX2 in function key type. After you set it, you pick up handset or handsfree, press this function key, then you can use the corresponding IP line.</p> <p>Key event: function mode</p>																
<p>Remark:</p> <ul style="list-style-type: none"> ● You can set speed dial function by Memory Key mode. For example, you need set speed dial 8000 via sip 1. Select memory key in F1's function key type, then fill 8000@1/f in the corresponding right table. ● You can set shortcut key of pbook, redial, DND, MWI, call forward, or callers by Key Event mode in function key type. Select key event in function key type, then fill F_PBOOK, F_REDIAL, F_DND, F_MWI, 																

F_CFWD, or F_CALLERS in the corresponding right table.

For example:

F 1	Key Event	F_PBOOK
-----	-----------	---------

4.3.5. Maintenance

4.3.5.1. Auto Provision

MAINTENANCE	
AUTO PROVISION SYSLOG CONFIG UPDATE ACCOUNT REBOOT	
Auto Update Setting	
Current Config Version	2.0002
Server Address	0.0.0.0
Username	user
Password	****
Config File Name	
Config Encrypt Key	
Protocol Type	FTP
Update Interval Time	1 Hour
Update Mode	Disable
<input type="button" value="APPLY"/>	

Auto Provision	
Field name	explanation
Current Config Version	Show the current config file's version.
Server Address	Set FTP/TFTP/HTTP server IP address for auto update. The address can be IP address or Domain name with subdirectory.
Username	Set FTP server Username. System will use anonymous if username keep blank.
Password	Set FTP server Password.
Config File Name	Set configuration file's name which need to update. System will use MAC as config file name if config file name keep blank. For example, 000102030405.。
Config Encrypt Key	Input the Encrypt Key, if the configuration file is encrypted.
Protocol Type	Select the Protocol type FTP、TFTP or HTTP.
Update Interval Time	Set update interval time, unit is hour.
Update Mode	Different update modes: 1. Disable: means no update 2. Update after reboot: means update after reboot. 3. Update at time interval: means periodic update.

4.3.5.2. Syslog Config

Syslog is a protocol which is used to record the log messages with client/server mechanism.

Syslog server receives the messages from clients, and classifies them based on priority and type. Then these messages will be written into log by some rules which administrator can configure. This is a better way for log management.

8 levels in debug information:

Level 0---emergency: This is highest default debug info level. Your system can not work.

Level 1---alert: Your system has deadly problem.

Level 2---critical: Your system has serious problem.

Level 3---error: The error will affect your system working.

Level 4---warning: There are some potential dangers. But your system can work.

Level 5---notice: Your system works well in special condition, but you need to check its working environment and parameter.

Level 6---info: the daily debugging info.

Level 7---debug: the lowest debug info. Professional debugging info from R&D person.

At present, the lowest level of debug information send to Syslog is info, debug level only can be displayed on telnet.

<input type="text" value="192.168.1.15"/>	<input type="text" value="192.168.1.20"/>	<input type="button" value="Modify"/> <input type="button" value="Delete"/>					
MMI Filter IP Table list:							
<p>MMI Filter Table Set</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 25%;">Start IP</td> <td style="width: 25%;"><input type="text"/></td> <td style="width: 25%;">End IP</td> <td style="width: 25%;"><input type="text"/></td> <td style="text-align: center;"><input type="button" value="Add"/></td> </tr> </table>		Start IP	<input type="text"/>	End IP	<input type="text"/>	<input type="button" value="Add"/>	
Start IP	<input type="text"/>	End IP	<input type="text"/>	<input type="button" value="Add"/>			
Add or delete the IP address segments that access to the phone.							
Set initial IP address in the Start IP column, Set end IP address in the End IP column, and click Add to add this IP segment. You can also click Delete to delete the selected IP segment.							
MMI Filter	Select it or not to enable or disable MMI Filter. Click Apply to make it effective.						

Notice: Do not set your visiting IP outside the MMI filter range, otherwise, you can not logon through the web.

4.3.6.2. Firewall

SECURITY

MMI FILTER	FIREWALL	NAT	VPN
------------	----------	-----	-----

Firewall Type

In_access Enable
 Out_access Enable

APPLY

Firewall Input Rule Table

Index	Deny/Permit	Protocol	Src Addr	Src Mask	Des Addr	Des Mask	Range	Port

Firewall Output Rule Table

Index	Deny/Permit	Protocol	Src Addr	Src Mask	Des Addr	Des Mask	Range	Port
0	deny	ICMP	192.168.1.14	255.255.255.0	192.168.1.118	255.255.255.0	more than	1

Firewall Set

Input/Output	Input	Src Addr	<input type="text"/>	Add
Deny/Permit	Deny	Des Addr	<input type="text"/>	
Protocol Type	UDP	Src Mask	<input type="text"/>	
Port Range	more than	Des Mask	<input type="text"/>	

Rule Delete

Input/Output	Input	Index To Be Deleted	<input type="text"/>	Delete
--------------	-------	---------------------	----------------------	---------------

Firewall Configuration

In this web interface, you can set up firewall to prevent unauthorized Internet users from accessing private networks connected to the Internet (input rule), or prevent unauthorized private network devices from accessing the Internet (output rule).

Firewall supports two types of rules: input_access rule and output_access rule. Each type supports at most 10 items.

Through this web page, you could set up and enable/disable firewall with input/output rules. System could prevent unauthorized access, or access other networks set in rules for security. Firewall, is also called access list, is a simple implementation of a Cisco-like access list (firewall). It supports two access lists: one for filtering input packets, and the other for filtering output packets. Each kind of list could be added 10 items.

We will give you an instance for your reference.

<input type="checkbox"/> In_access Enable	<input type="checkbox"/> Out_access Enable
---	--

Input/Output	Input	Src Addr	<input type="text"/>	Add
Deny/Permit	Deny	Des Addr	<input type="text"/>	
Protocol Type	UDP	Src Mask	<input type="text"/>	
Port Range	more than	Des Mask	<input type="text"/>	

Field name	explanation
------------	-------------

In_access enable	Select it to Enable in_ access rule
out_access enable	Select it to Enable out_ access rule
Input/Output	Specify current adding rule by selecting input rule or output rule.
Deny/Permit	Specify current adding rule by selecting Deny rule or Permit rule.
Protocol Type	Filter protocol type. You can select TCP, UDP, ICMP, or IP.
Port Range	Set the filter Port range
Src Addr	Set source address. It can be single IP address, network address, complete address 0.0.0.0, or network address similar to *.*.*.0
Des Addr	Set the destination address. It can be IP address, network address, complete address 0.0.0.0, or network address similar to *.*.*.*
Src Mask	Set the source address' mask. For example, 255.255.255.255 means just point to one host; 255.255.255.0 means point to a network which network ID is C type.
Des Mask	Set the destination address' mask. For example, 255.255.255.255 means just point to one host; 255.255.255.0 means point to a network which network ID is C type.

Click the **Add** button if you want to add a new output rule.

Firewall Output Rule Table								
Index	Deny/Permit	Protocol	Src Addr	Src Mask	Des Addr	Des Mask	Range	Port
0	deny	ICMP	192.168.1.14	255.255.255.0	192.168.1.118	255.255.255.0	more than	1

Then enable out_access, and click the Apply button.

So when devices execute to ping 192.168.1.118, system will deny the request to send icmp request to 192.168.1.118 for the out_access rule. But if devices ping other devices which network ID is 192.168.1.0, it will be normal.

Rule Delete			
Input/Output	Input	Index To Be Deleted	Delete

Click the **Delete** button to delete the selected rule.

4.3.6.3. NAT Config

NAT is abbreviated from Net Address Translation; it's a protocol responsible for IP address translation. In other word, it is responsible for transforming IP and port of private network to public, also is the IP address mapping which we usually say.

DMZ config:

In order to make some intranet equipments support better service for extranet, and make internal network security more effectively, these equipments open to extranet need be separated from the other equipments not open to extranet by the corresponding isolation method according to different demands. We can provide the different security level protection in terms of the different resources by building a DMZ region which can provide the network level protection for the equipments environment, reduce the risk which is caused by providing service to distrust customer, and is the best position to put public information

The following chart describes the network access control of DMZ

4.4. Configuration via Keypad

4.4.1. Keypad introduction

User can do brose, modify or cancel via screen menu by using ,

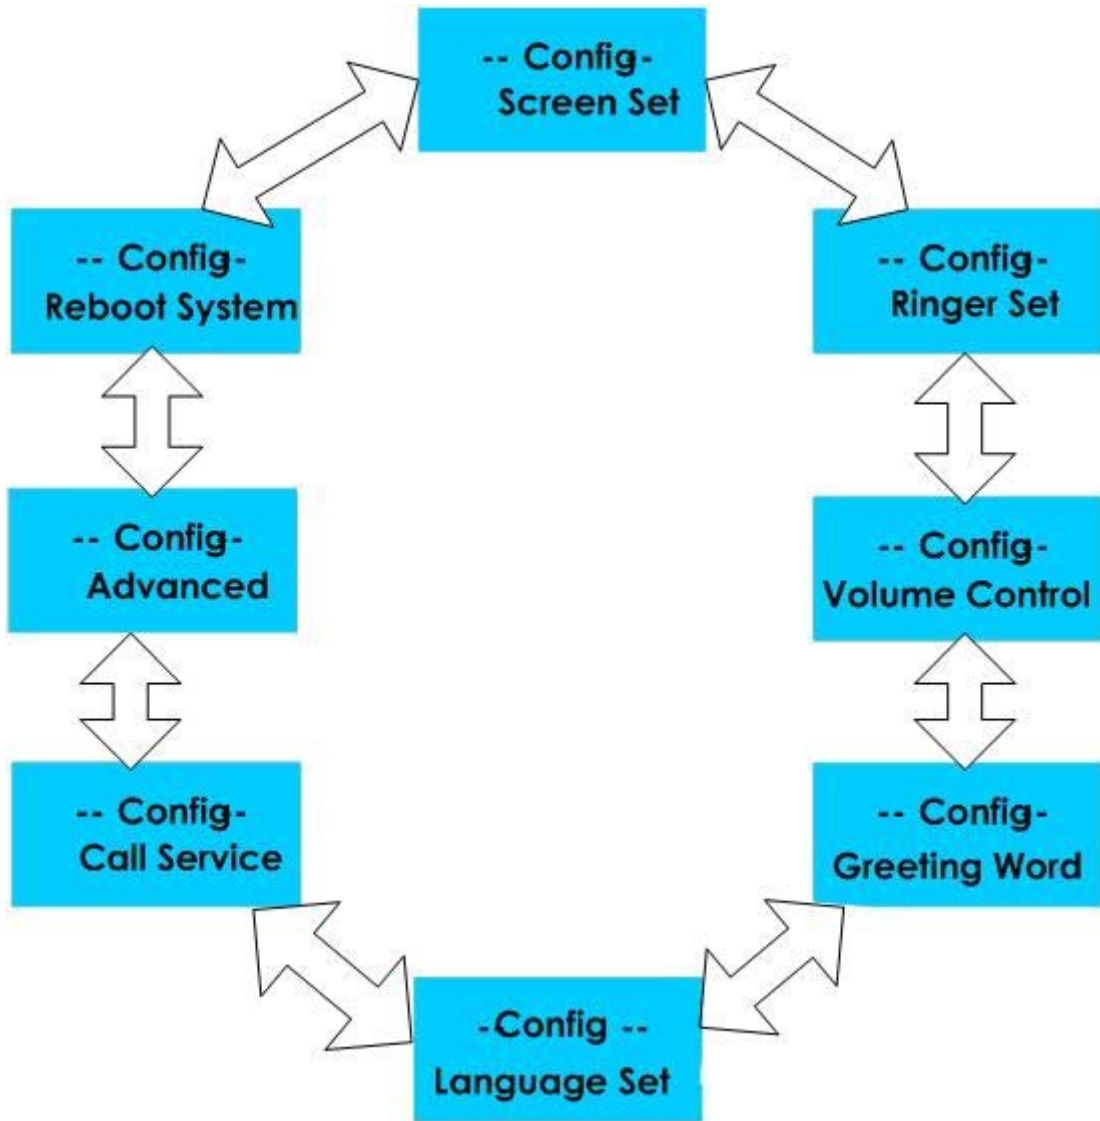

and Soft1/Soft2/Soft3

- Use  and Soft1 to select the sub-menu.
- Use  to adjust screen brightness and contrast, ring volume and voice volume.
- Use Soft2 and Soft3 to enter/modify or exit/cancel.

4.4.2. Menu Tree

Menu Tree List:

5. Appendix

5.1. Specification

5.1.1. Hardware

Item		FV6030
Adapter (Input/Output)		Input: 100-240V Output: 5V 1A or PoE(802.3af, optional)
port	WAN	10/100Base-T RJ-45 for LAN
	LAN	10/100Base-T RJ-45 for PC
Power Consumption		Idle: 2.0W/Active: 2.3W
LCD Size		128*64 dot matrix LCD
Operation Temperature		0~40°C
Relative Humidity		10~65%
CPU		INFINEON (MIPS 4Kc@150MHz, DSP@100MHz)
SDRAM		128Mbits
Flash		16Mbits
Dimension(L x W x H)		235x200x81mm
Weight		2.07lb.(0.94kg)

5.1.2. Voice features

- Support SIP 2.0 (RFC3261) and correlative RFCs
- Support IAX2
- SIP supports 5 SIP servers. Can connect to 5 SIP servers at the same time
- Codec: G.711A/u, G.7231 high/low, G.729a/b, G.722
- Echo cancellation: G.168 Compliance in LEC, additional acoustic echo cancellation(AEC) can reach 96ms max filter length in hands-free mode
- Support Voice Gain Setting, VAD, CNG
- Full duplex hands-free speakerphone
- NAT transverse: support STUN client
- SIP support SIP domain, SIP authentication(none basic, MD5), DNS name of server, Peer to Peer/ IP call
- DTMF Relay: support inband, SIP info, RFC2833
- SIP application: SIP Call forward/transfer (alert/blind/attended) /hold/waiting/3 way talking/push to call/paging and intercom/click to dial/telephone exchange/sms/pickup/joincall/redial/unredial/vport
- Call control features: Flexible dial map, hotline, empty calling No. reject service, black list for reject authenticated call, limit call, no disturb, caller ID
- Support phonebook 500 records
- Incoming calls / outgoing calls / missing calls. Each supports 100 records
- Support voice record on SIP server
- Support voice record in this phone, 20 minutes total, 5 minutes max of 3 records or 15 records max
- 9 kind of ring types and 2 user-defined music rings
- Support DNS SRV
- Support Memo
- Support Multilanguage
- Phonebook supports vcard standard
- 12/24 hours time display
- Support daylight saving time

- Support path, gruu
- Support SRTP
- Support SIP Privacy

5.1.3. Network features

- WAN/LAN: support bridge and router model
- Support PPPoE for xDSL
- Support basic NAT and NAPT
- Support DHCP client on WAN
- Support DHCP server on LAN
- Support main DNS and secondary DNS server
- Support VLAN (optional: voice vlan/ data vlan)
- Support DMZ
- Support DNS Relay, SNTP Client, Firewall
- Support VPN (L2TP/ UDP TUNNEL)
- QoS with DiffServ
- Network tools in telnet server: including ping, trace route, telnet client

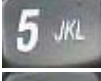

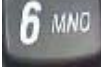

5.1.4. Maintenance and management

- Web ,telnet and keypad management
- Management with different account right
- Upgrade firmware through POST mode
- Upgrade firmware through HTTP, FTP or TFTP Telnet remote management/ upload/download setting file
- Safe mode provide reliability
- Support Auto Provisioning (upgrade firmware or configuration file)
- Support Syslog

5.1.5. Special features

- Support headset
- 5 programmable keys, realizing memory keys or SIP line keys
- Support desk position and wall-mountable
- Led to indicate missed call or voicemail
- Support 3 softkeys

5.2. Digit-character map table

Keypad	Character	Keypad	Character
	1 @		7 P Q R S p q r s
	2 A B C a b c		8 T U V t u v
